WORKSHOP ROADMAP

1. The 3 Levels of AI (LLMs → Workflows → Agents)
2. Going Deeper: Five Pillars
3. What's Actually Working in the Industry
4. Tiin: Agentic Thinking in Practice
5. Applying It: Scenario Discussion
6. What This Means for You
7. Why AI Won't Take Over The World — And How to Start
8. Q&A

LEVEL 1: LLM TRAITS

✳ REACTIVE BY DESIGN

It creates content, but it does not take action in the real world unless a human executes the next step.

✳ STOPS AT GENERATION

It creates content, but it does not take action in the real world unless a human executes the next step.

LEVEL 2: WORKFLOW TRAITS

✳ CONNECTED TO TOOLS

Unlike Level 1, the model is no longer isolated — it can access tools and data to complete multi-step tasks.

✳ PREDEFINED DECISION PATH

But the path it follows is still predefined; it executes a process rather than deciding one.

LEVEL 3: AGENTIC AI TRAITS

- **REASONS**

  The model decides what to do next in pursuit of a goal.

- **ACTS**

  The agent uses connected tools to execute real-world steps.

- **ITERATES**

  The agent evaluates results and adjusts until criteria are met.

3 MAIN TERMS

GENERATIVE AI

Creates content in response to prompts.

AI WORKFLOW

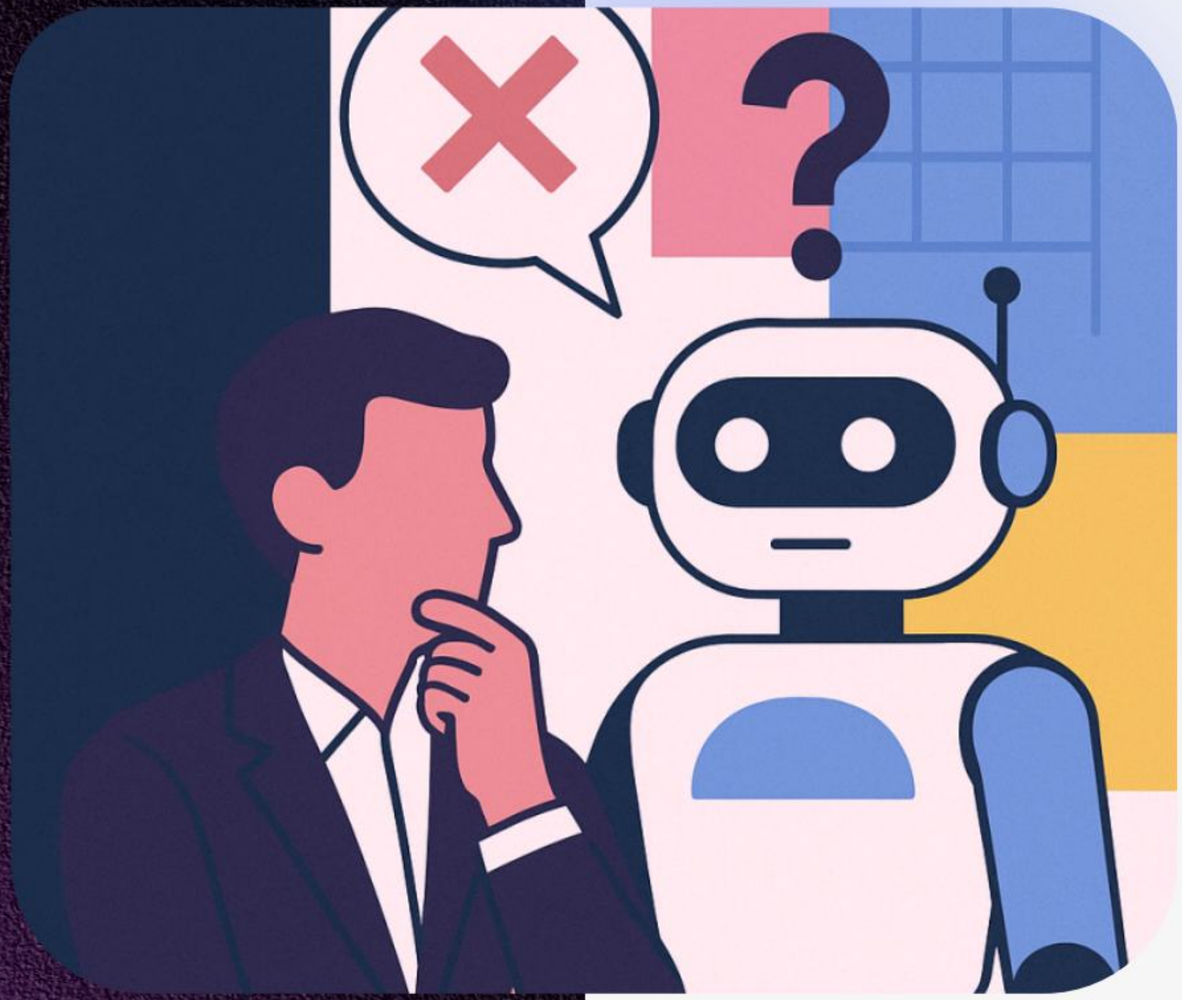

Follows a predefined path using tools.

AGENTIC AI

Decides which tools to use to achieve a goal.

GOING DEEPER:
FIVE PILLARS

ليالي AI

AI agents are usually the wrong first answer...

»»»

FIX THE WORKFLOW FIRST

If the process is broken, adding an agent will only automate the chaos.

DESIGN BEFORE YOU BUILD

Plan the steps clearly in plain English before connecting tools.

CONTEXT DETERMINES QUALITY

Agents need structured context and data, not just better prompts...

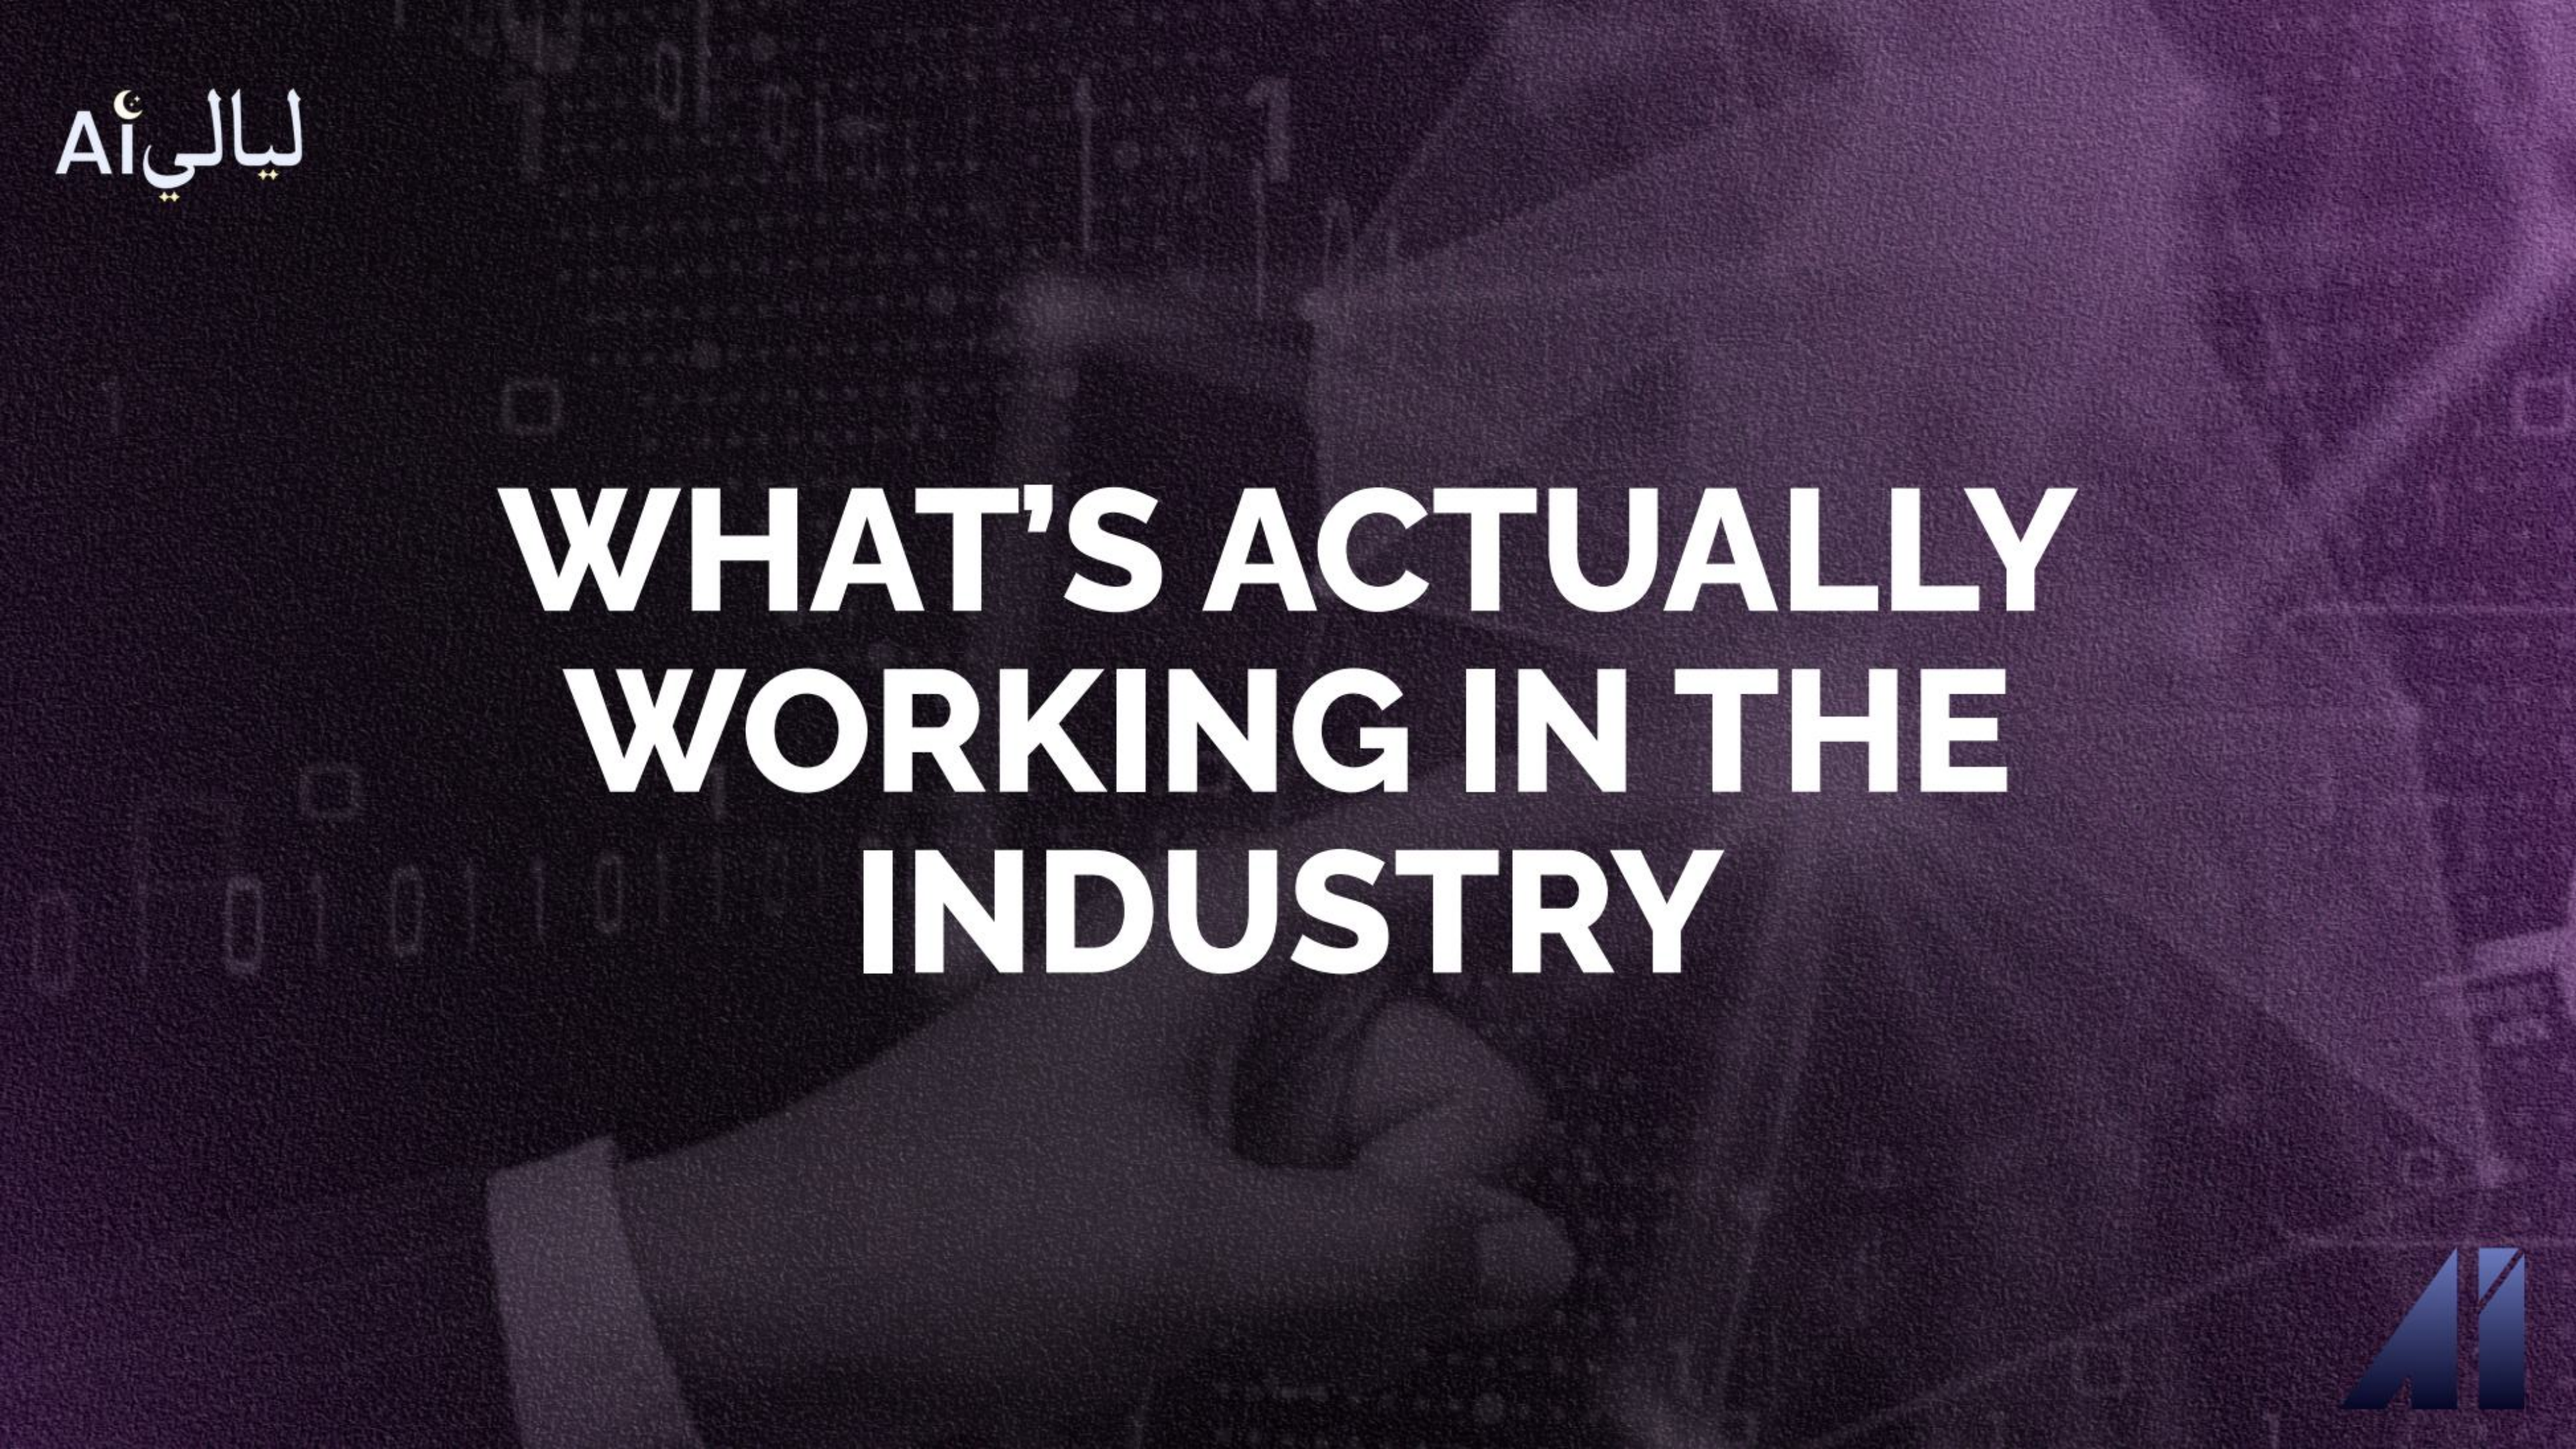

SCALING CHANGES EVERYTHING

What works in a demo often fails under real-world complexity.

GOVERNANCE IS NOT OPTIONAL

Autonomous systems require monitoring, limits, and human oversight.

WHAT WE SEE WITH BUSINESSES

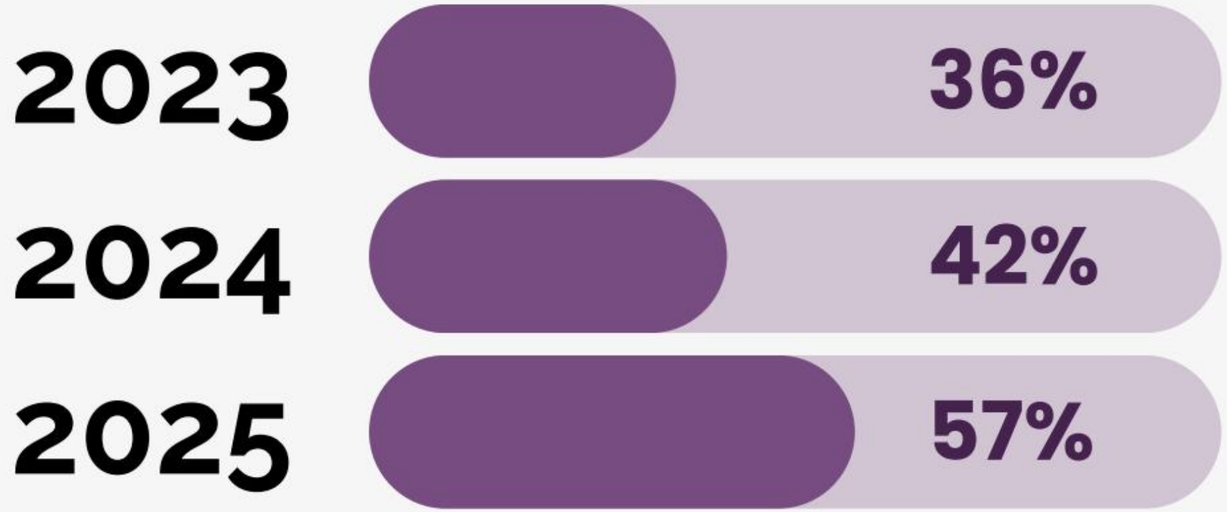

- Most businesses ask for “AI” without defining the problem
- They know they’re inefficient...but don’t know why
- They assume agents are the answer
