Damian – Your Digital Ally

Designed by humans, powered by AI, and anchored in science

Executive Summary

Problem

Indian teenagers face a pressing mental health crisis as they do not have support-based resources to cope with Instagram-induced negative emotions.

India is facing an **increase in mental health disorders due to limited awareness, stigma-induced reluctance to seek help,** and the alarming **treatment gap of 95% posing significant barriers** for adolescents seeking timely care. Instagram's impact on young Indians includes increasing emotions such as **FOMO, depression, and anxiety**, fostering dissatisfaction with life and impacting their psychological well-being. This, coupled with a distressing **40% surge in suicidal thoughts from 2010 to 2020,** underscores the urgency for **accessible interventions.**

Our Solution

Damian, our therapeutic in-app AI chatbot on Instagram, helps Indian youth navigate Instagram-induced negative emotions.

Our solution **Damian, an in-app AI chatbot provides a supportive space** for Indian youth to navigate instagram-induced emotions**.** Damian employs a therapeutic conversational design, mirroring counseling sessions, resulting in a **significant 28% reduction in depressive tendencies** and a substantial **31% decrease in anxiety** among users. Seamlessly integrated in the user's direct messages on Instagram via a third-party partnership, Damian is trained specifically to engage teenagers, providing practical coping exercises, **directly combating Instagram's adverse mental health impact on India's youth.**

Impact

Damian provides teenage users with the necessary support, ultimately creating a healthier experience on Instagram.

After 20 months, Damian will have helped **106 166 655 Indian users,** effectively **combat negative emotions like FOMO, anxiety, and depression.** This will ultimately make the user's experience on Instagram more healthy. Damian's integration not only catalyzes emotional support for Instagram users in India but also **establishes a global standard** for technology-driven mental health support, with an observed **85% mood improvement** among users. We plan to expand Damian internationally rendering a **world-wide impact.**

Challenges in Teen Mental Health: The Indian Landscape

In India, the challenges surrounding teen mental health, from low digital literacy to the unavailability and unaffordability of professional support, underscore the critical need for accessible and empathetic interventions like Damian to bridge the gap and provide timely assistance.

Low Digital Literacy Among Parents

- Only **30% of adults** over the age of 30 are digitally literate, compared to **60% of 18-29 year-olds**.
- This disparity affects the effectiveness of **Meta's parental tools**, hindering their application.

Shortage of Mental Health Professionals

- The Indian Psychiatric Society estimates **9000 psychiatrists in India,** with 0.75 psychiatrists for every 100,000 inhabitants.
- The shortage leads to **delayed interventions,** allowing mental health conditions to escalate.

High Stigma Surrounding Mental Health

- Over **80% of people in India do not seek** professional psychiatric assistance, with a 74.61% prevalence of stigma toward mentally ill individuals.
- **Mislabeling intensifies feelings of alienation** among youth, discouraging seeking help.

Unaffordability of Mental Health Care

- Spending on mental disorders pushes 20% of Indian families **into poverty.**
- A household allocates over **18.1% of its total monthly budget** to care for a member with a mental disorder.

Problem

Instagram's Impact on Teen Mental Well-being

Instagram's influence on teenage mental health is significant, with evidence pointing to increased FOMO, higher risks of depression with extended usage, and a strong association with anxiety. Understanding these impacts is crucial in developing solutions for improved mental well-being among adolescents.

01

FOMO (Fear of Missing Out)

37% of Instagram users report experiencing FOMO.

FOMO (*Fear of Missing Out*) is a phenomenon associated with heightened levels of anxiety and depression. Instagram contributes to the perpetuation of FOMO, resulting in heightened sensations of loneliness and social isolation.

02

Depression

For each additional hour spent on Instagram, adolescents saw a 13% rise in the risk of depression.

Across multiple studies, teenagers and young adults who dedicate large amounts of time to platforms like Instagram and Facebook tend to report significantly higher rates of depression.

03

Anxiety

A survey of 1,500 teens found Instagram to be the most detrimental for mental health, associated with anxiety.

Instagrams image-centric culture and comparison habits heighten anxiety among teenagers, impacting mental wellbeing. Spending more time on Instagram increases the likelihood of feelings of inadequacy and negative self-perception.

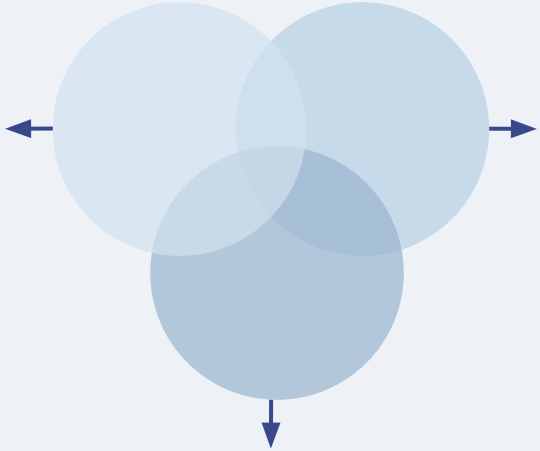

Problem

Strategic Focus: Mumbai, Maharashtra

💡 Mumbai, with its high concentration of active Instagram users, early onset of mental disorders in youth, and the projected economic loss, **emerges as a strategic focal point for impactful mental health interventions** with far-reaching societal and economic benefits.

Large Amount of Active Instagram Users

- Mumbai hosts over **1 million active** Instagram users in the crucial age group of **15 to 24**.
- This concentration is pivotal, particularly considering the associated **25% surge in anxiety disorders** nationwide.

Forecasted Economic Loss

- India is projected to incur a significant **$1.03 trillion economic loss** due to mental health issues.
- Focusing on mental health interventions in Mumbai, the largest economic hub in Maharashtra, becomes **socially imperative and economically strategic**.

Early Onset of Mental Disorders in Youth

- Research indicates that **50%** of all mental disorders **emerge by the age of 14, and 75% by 18.**
- **Targeting Mumbai's youth population** is a prudent strategy to foster healthier communities and address mental health issues early on.

Problem

Preeti with her son, Pranshu

For more stories like this

Click Here

A Heartbreaking Reality: Preeti Yadav's Tragic Loss

The heartbreaking loss of Pranshu **underscores the urgency for Meta to reevaluate its strategies** and adopt a new approach to safeguard the mental well-being of adolescents.

On the 21st of November 2023, Preeti's son **committed suicide** after posting an Instagram reel which received +4000 **homophobic comments.**

> *"Pranshu was mature above his age. He knew how to handle hate comments. In fact, we used to laugh on trollers together. The only thing that is hurting me right now is why he had not told me just once."*

Despite having known her son was queer for years he never **opened up to her about how the hate was affecting him**.

However even if he had opened up about it she would not have been able to provide him with the necessary support he needed-

> *"As a single parent you have to bear much economic stress."*

Meta has been trying to censor hate comments for decades but yet severe cases like these still happen. It is imperative for Meta to start approaching this from a new angle if they want to help **protect adolescents from mental health damages** it's platform perpetuates.

Solution

Solution

Meet Damian:
Your Digital Ally

💡 Damian, your **in-app AI-chatbot** in Instagram direct messages

Purpose and Functionality:

- Damian creates a safe space for young people to navigate and work through negative emotions like FOMO, anxiety, and insecurity.
- Instagram's direct messages serve as the canvas for accessible, empathetic, and real-time assistance.

Unique Approach - Conversational Design:

- Damian replicates the therapeutic flow of a counseling session.
- The conversational design ensures teens deeply engage, offering advice and, most importantly, making users feel understood.

Teen Engagement:

- Damian engages teens authentically, providing valuable advice and ensuring users feel genuinely understood amid their emotional battles.

"In the storm of adolescence, being truly heard is the lifeline that transforms turmoil into solace. Every teenager deserves to feel understood and supported."

Solution

Empowering Teens with Damian: A chatbot designed for a safe space and evidence-based support

Damian is not just a chatbot; it's a comprehensive mental health companion, providing a safe haven for expression and equipping teens with practical tools to navigate their emotions.

01

User Empowerment through Safe Expression

- Provide a crucial outlet for teens to express their emotions.
- Engage in conversation to alleviate feelings of isolation, offering solace in being heard.
- Dialogue as stress relief, breaking down issues into manageable pieces, reducing feelings of being overwhelmed.
- Seek external perspectives by confiding in someone outside the scenario for fresh insights and a different outlook.

02

Beyond Just Being Heard

- Damian goes beyond making teens feel heard.
- Utilizes evidence-based therapeutic techniques: CBT (Cognitive Behavioural Therapy), DBT (Dialectical Behaviour Therapy) and IPT (Interpersonal Psychotherapy)

03

Practical Support with Interactive Exercises

- Damian suggests interactive exercises via the Instagram Wellness Hub.
- Exercises based on cognitive-behavioral therapy, allowing teens practical work through their emotions.
- Emphasizes combining emotional expression and evidence-based techniques for holistic support.

Solution

Damian's Solution to India's Teen Mental Health Challenges

Damian would transform teen mental health support by providing round-the-clock support, eliminating stigma through AI interaction, and fostering proactive engagement for self-awareness.

Timing

Problem Facet:

Teens experience intense negative emotions outside regular hours.

Our Solution:

24/7 access and instant responses.

81% of Woebot app messages sent during non-traditional care hours.

Stigma

Problem Facet:

Social stigma prevents teens from confiding in trusted individuals.

Our Solution:

Zero stigma and complete anonymity with AI interaction.

21% of users prefer talking to AI due to a lack of someone else to confide in.

Unaware

Problem Facet:

Adolescents may lack awareness of their mental health needs.

Our Solution:

Damian initiates conversations and uses therapeutic tools for self-awareness.

Proactive engagement helps identify the extent of help needed.

Solution

Powerful Partnership: Meta and Elomia 's AI Chatbot

The partnership with Elomia brings a powerful and user-friendly mental health solution to Meta, ensuring privacy, transparency, and evidence-based support for users navigating mental health challenges.

Elomia, an AI-powered mental health chatbot, addresses issues like anxiety, depression, low self-esteem, loneliness, relationship issues, and insomnia.
Optimized for scalability, Elomia can seamlessly integrate into existing platforms.
Elomia operates as an artificial intelligence that functions like a therapist, offering support for a range of mental health concerns.

> *The artificial intelligence that works like a therapist*

Why Partner with Elomia?

- Partnering with Elomia ensures user anonymity, maintaining **privacy boundaries for a transparent and trustworthy interface**.
- Meta will not have access to chat logs, **adding an extra layer of transparency and user trust**.
- Partnering with Elomia allows Meta to **leverage a proven and efficient solution** without the need for extensive development.

Impressive User Outcomes

9 in 10 users find talking to Elomia helpful

85% of Elomia users after 4 weeks of usage say that their **mood has improved**

Solution

Why Choose Elomia?

01 **Easy Integration**
Elomia seamlessly integrates with existing software and can be embedded as a white-labeled version in apps.

02 **Safe & Secure**
Elomia follows established protocols in high-risk situations and stores data in a HIPAA-compliant manner.

03 **Research-Driven**
Trained on thousands of 'clinical hours,' Elomia employs evidence-based approaches with documented outcomes.

04 **User-Friendly Solution**
With proprietary AI technology, Elomia is used 2.5 times more often than other chatbots like Wysa or Woebot

3,407,731 messages have been sent

User Interviews Reflect Positive Impact:

Regular users report increased abilities in coping with difficult emotions, improved problem-solving skills, enhanced motivation and productivity, improved social skills, and expanded circles of friends, as well as progress in hobbies and goals.

After **4 weeks** of using Elomia reports showed:

28% decrease in depressive tendencies

31% decrease in anxiety tendencies

Damian in Action: Daily Engagement and Real-Time Support

Experience Damian's daily engagement routine and real-time support in action, **designed to establish a meaningful connection** with users and foster emotional well-being **through personalized interactions** and access to Elomia's tools and insights.

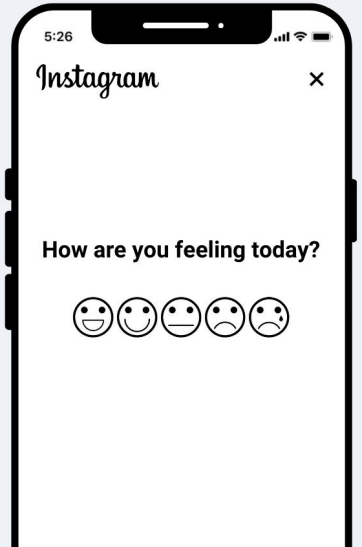

For a Live Walkthrough of How Damian Works **Click Here**

01

Daily Emotional Check-ins: Establishing a Routine

- **Prompt for Engagement:** A pop-up window prompts teens to log their emotions using emojis upon opening Instagram.
- **User-centric Design:** Teens express emotions with simple emojis, forming a user-specific emotional baseline for Damian's adaptive interactions.

Purpose: Establishing a habit of engagement, turning Damian into a consistent source of support.

02

Follow-Up Messages and Daily Quotes

Personalised Follow-up

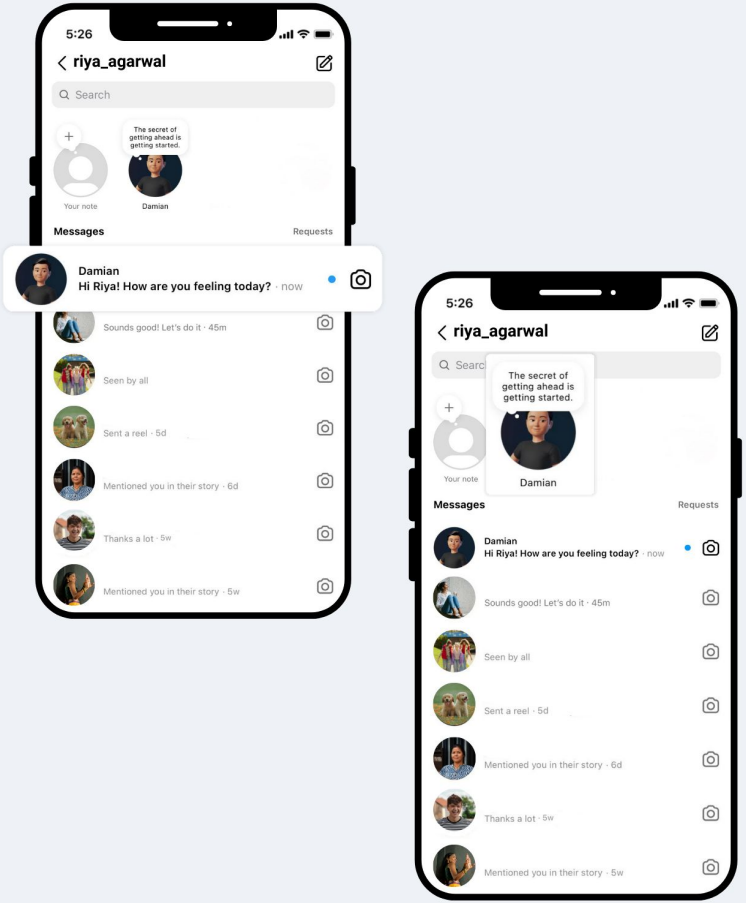

- **Initiating Interaction:** Damian sends personalized follow-up messages if users don't respond to daily updates.
- **Human-like Interaction:** Ensuring users feel cared for and understood through personalized follow-ups.

Purpose: Maintaining a human-like interaction to enhance user connection.

Daily Inspiration Notes

- **Inspirational Quotes:** Damian posts daily quotes from a curated database based on the user's recent emotional state.
- **Algorithmic Selection:** The algorithm factors in the user's emotional state for personalized inspiration.

Purpose: Infusing positivity and inspiration, fostering a more optimistic mindset.

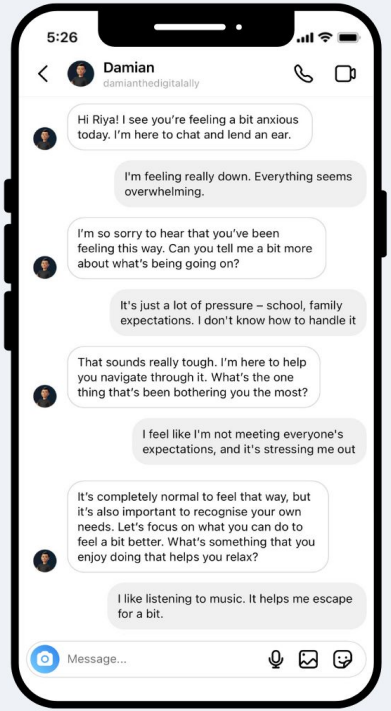

03

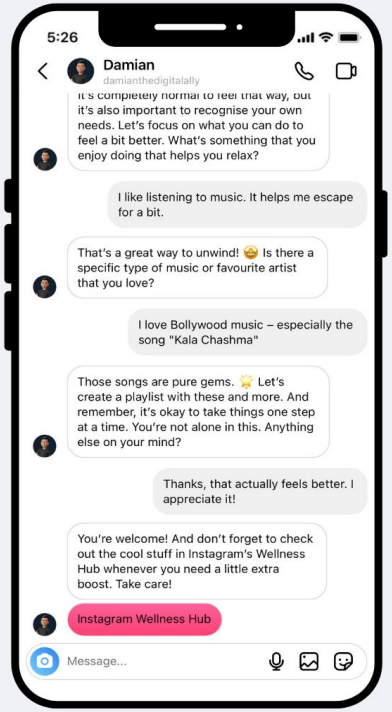

Demo Conversations: Real Support in Action

- **Real-Time Support:** Damian's natural language understanding (*NLU*) interprets nuanced user sentiments.
- **24/7 Availability:** Instant replies even on weekends and at 4 AM, ensuring continuous support.
- **Empathetic Conversations:** NLP *(Natural Language Processing*) creates friendly, informal, and empathetic conversations.
- **Context Awareness:** RNNs (*Recurrent Neural Networks*) ensure a contextual understanding, incorporating cultural nuances.
- **Targeted Therapy:** Specifically addressing the needs of adolescents for more relevant conversations.
- **Seamless Integration:** Directing users to Instagram's Wellness Hub for additional tools within the app.

Instagram Wellness Hub: Elomia Tools & Insights

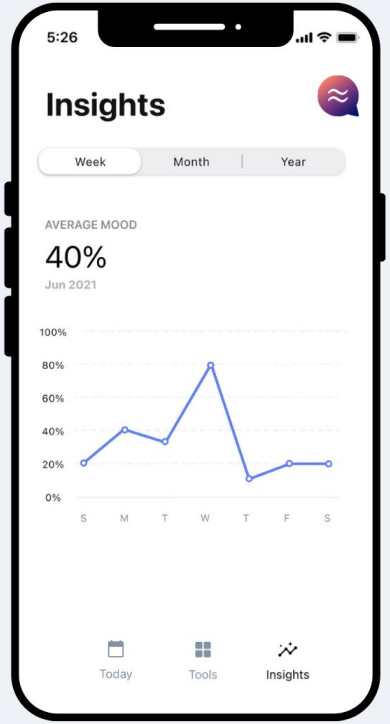

Direct Access
The Elomia Tools and Insights can be directly accessed from the chat itself or the top right corner of the DMs

Click Here

Elomia Tools
Users gain access to a variety of tools designed to support emotional well-being. From mindfulness activities to personalized exercises, Elomia's tools offer an engaging and effective way to practically navigate negative emotions.

Elomia Insights
Provides users with a visual representation of their emotional journey over time. After analyzing user interactions and emotional states, Elomia Insights offers valuable feedback allowing users to manage their emotions more effectively.

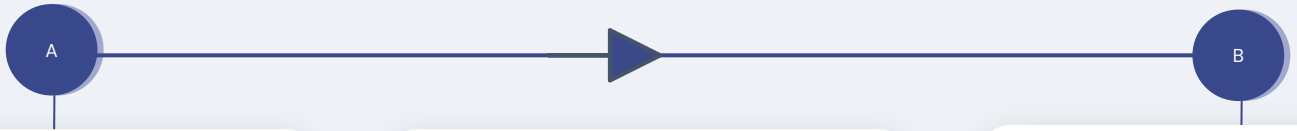

Product

Meta's AI Chatbot Universe: Navigating the Present and Charting the Future

As Meta transitions from current AI chatbot characters to the future integration of Damian, there are technical challenges to address to ensure a seamless and secure experience

Status -quo

Future

Instagram's current AI chatbot characters

- Currently Instagram has 28 **AI chatbots** modeled after public figures that users can engage with.
- Along with other AI Meta applications these have been rolled out exclusively in the United States.
- These AI chatbots can be accessed from a users personal direct messages.

Technical challenges to get from point A to B

- **API Integration:** Ensuring compatibility between Instagram's platform and Elomia's chatbot might face limitations due to API constraints.
- **Message Privacy:** Implementing secure encryption or transmission protocols to safeguard user conversations from Meta's access. Along with adhering to data privacy laws (GDPR, CCPA).

How Damian will be incorporated into this landscape

- Damian will be trained on Elomia's database.
- Meta does not have access to the conversation and cannot train any of its chatbots on feedback received.
- Still interfaced the same way through direct messages.
- Still has personality and conversational tone.

Product

Product Roadmap: Building a Psychologically Informed AI Chatbot

May 2024

Partnerships with Teen Psychologists

Objective: Collaborative foundation building.
Target: Form partnerships with at least 80% of identified teen psychologists and institutions within 3 months.

Aug 2024

Developing the foundational algorithms

Objective: Building a comprehensive model.
Target: Achieve a 20% improvement in algorithm precision based on psychologist input.

Dec 2024

Prototype Testing with Psychologists

Objective: Expert input integration.
Target: Achieve a 15% increase in the chatbot's ability to address emotional concerns.

Jan 2025

Pilot Testing in Mumbai, India

Objective: Comprehensive pilot with expert guidance.
Target: Achieve a user satisfaction rating of 4.5 out of 5 based on psychologist insights.

June 2025

Internal Testing and Technical Refinement

Objective: Technical and clinical evaluation.
Target: Achieve a 10% improvement in user interface based on combined feedback.

June 2025

Expansion to 5 States

Objective: Regional scaling with cultural sensitivity.
Target: Successfully expand to 5 major states: Maharashtra, Karnataka, Delhi, Rajasthan & Madhya Pradesh.

Product

Global Expansion Plan

Jan 2026

Global Cultural Adaptation

Expand to New Countries
Local Collaboration: Work with psychologists for cultural relevance.
Multilingual Support: Enhance accessibility with multiple languages.
Partnerships: Collaborate with global mental health organizations.

Jan 2027

Integration with Educational Institutions

School Collaboration:
Direct Integration: Place the chatbot in schools for direct student access.
Empower Educators: Provide resources for heightened awareness.
Academic Stress Support: Implement features for stress management.

June 2027

AI Advancements

Advanced AI for Emotional Intelligence:
Investment: Enhance emotional intelligence for better support.
Dynamic Adaptation: Use machine learning for personalized responses.
Improved Interactions: Explore NLP enhancements.

Jan 2028

Tailoring the AI Chatbot to Adults

Global Collaboration:
With Adult Psychologists: Tailor to adult mental health needs.
Work-related Stress Features: Address career challenges and work-related stress.
Financial Well-being Tools: Integrate tools for financial planning.

Jan 2029

Incorporate into the Metaverse

Metaverse Integration:
Explore and Implement: Stay ahead with metaverse integration.
AR and VR Support: Use AR and VR for immersive mental health support.

Expanding into the Metaverse: Damian's Integration for Enhanced Mental Wellbeing

Damian's effective integration into the Meta metaverse signifies a commitment to advancing mental wellbeing in the digital age, with a vision for seamless support, user comfort, and innovative solutions for the challenges and opportunities.

01

Integration Vision

Seamless Integration: Damian is envisioned to be seamlessly integrated into the Meta metaverse, extending its mental health support to users in VR headsets.

Built-In Messaging Tool: The metaverse experience will be enhanced with a built-in messaging tool, allowing users to connect with Damian during moments of anxiety or stress.

02

Collaboration with Meta

Commitment to Innovation: Our commitment extends to pioneering approaches to address challenges and opportunities presented by Meta, going beyond current platforms.

Adapting to the Metaverse: Damian's integration exemplifies our readiness to adapt and innovate within the dynamic landscape of the Meta company.

03

Pioneering Approaches

Crucial Element for Mental Health: Our collaboration with Meta positions Damian as a crucial element in promoting mental health within the evolving digital landscape.

Metaverse Experience Enhancement: Damian's presence enhances the overall metaverse experience, providing users with accessible and empathetic mental health support.

04

Evidence

Evidence

Case Study: Woebot Health™

Aim of this Case Study is to show that **AI therapy chatbots tailored specifically to adolescents are effective in providing support**

Woebot for Adolescents replicates the way clinicians move through a session, using great conversational design and the familiar modality of smartphones to enable teens to deeply engage. Backed by decades of CBT research and built with proprietary technology.

Young people are less likely to engage with traditional therapy for many reasons. Woebot can bypass the stigma surrounding mental health to engage adolescents on their terms.

★★★★★

"I like the ease of access. If I needed help immediately, I could get it. Just knowing I had someone/something there to help me out reduced some of my anxiety."

- Woebot User

★★★★★

"I could rant and not feel judged. I could relate to some of the things Woebot said and it made me feel seen."

- Woebot User

89% of 12 -19 year olds reported being very satisfied with Woebot after 2 weeks.

22% reduction in depression symptoms amongst adolescents in 2 weeks

81% of messages are sent outside typical provider hours, when no other care is available

65% of users reported feeling better after completing their first module

Evidence

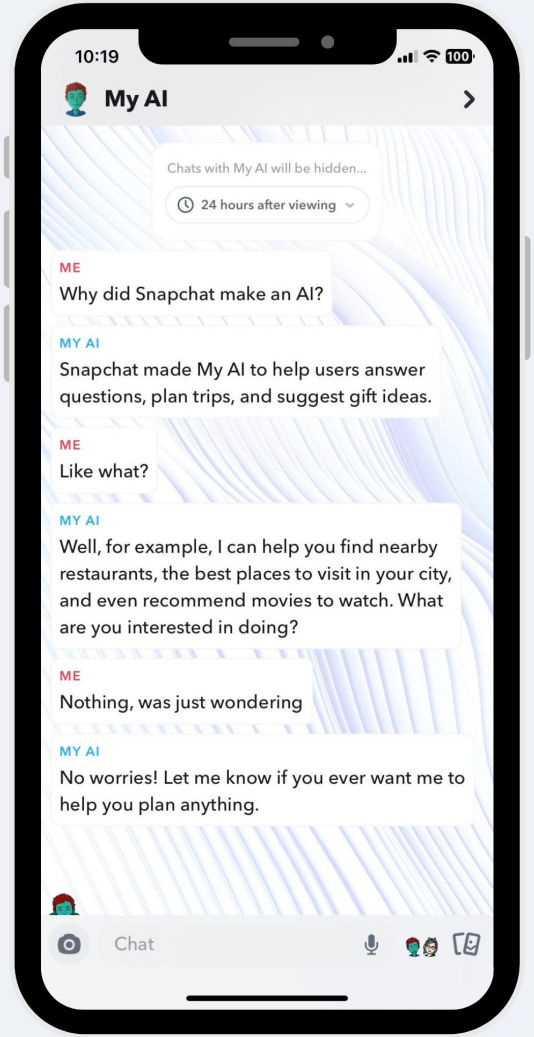

Case Study: SnapChat

Aim of this Case Study is to show that **teens are comfortable interacting with AI chatbots on a social media platform.**

Snapchat's My AI is a chatbot that can answer questions, offer advice, and engage in conversations with users. It is powered by OpenAI's ChatGPT technology and has been trained on a diverse range of texts to provide helpful and informative responses.

Since February 2023, more than **150 million people** have now sent over **10 billion messages** to My AI, which puts it among the largest consumer chatbots available today.

The hype around conversational AI has no doubt helped boost interest in My AI. With the main age demographic for snapchat being **users aged 16 - 24**, this showcases how **young people are comfortable with engaging with AI technology** on social media platforms.

Evidence

Expert Validation: Recognized Voices on AI and Mental Health

Experts in the fields of technology, health, and mental health recognize the potential of AI chatbots, like Damian, in addressing mental health challenges.

> It's widely believed that **AI** has the potential to be **highly beneficial** when it comes to **tackling mental health issues**.

- Bernard Marr
(Strategic technology advisor to governments and companies)

> **AI chatbots** that support mental health show promise in **treating anxiety** & **depression**.

- Jamie Ducharme
(Health correspondent at TIME)

> **AI chatbots** can offer a **safe** and **anonymous space** for individuals to discuss their mental health concerns, which can be particularly beneficial in rural areas where access to mental health services may be limited.

- Dr Luke Balcombe
(Member of the Australian Institute for Suicide Research and Prevention)

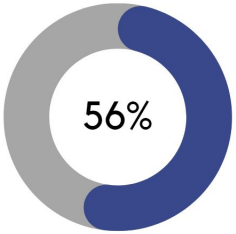

Evidence

Teen Voices: Insights from Instagram Users Below 24

Direct insights of active Instagram users aged 13 - 24 reveal a **significant level of comfort with AI chatbots** for mental health discussions, with a **notable percentage expressing belief in the application's efficacy** to address negative emotions.

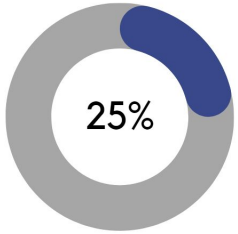

We surveyed 100 active Instagram users aged 13 - 24

Comfort with AI Chatbots

56% Said they would feel safe/comfortable talking to an AI chatbot about their mental health.

Belief in Application Efficacy

25% Said they believe this application would help mitigate the negative emotions they experience

Evidence

Assumptions & Drawbacks: Considerations for Implementation

While the implementation of the AI chatbot holds promise, it's crucial to consider assumptions related to age verification, potential dependencies, and ethical drawbacks, ensuring transparency, security, and genuine user engagement.

Assumptions

Demographic Customization: The AI chatbot is specifically developed for the age group of 13-24, assuming Instagram's age verification mechanisms are reliable within this range.

Age Verification Reliability: An assumption that Instagram's age verification mechanisms can accurately confirm users' ages within the specified 13-24 years.

Possible dependency between the child and the chatbot

Risk of Dependency: Acknowledging the risk that users, especially children, might substitute real human connections with the chatbot, leading to potential social isolation.

Lack of Genuine Support: Overdependence on a chatbot may hinder genuine emotional support from peers or family, impacting emotional development.

Ethical Drawbacks

Transparency and Security: Recognizing the need for transparent data policies to address privacy concerns, ensuring users' data is handled ethically and securely.

Gaming Responses: Highlighting the potential for teenagers to manipulate or "game" the system, providing false information to receive desired responses rather than engaging sincerely with the chatbot.
