1. EXECUTIVE SUMMARY

1.1 About The Event

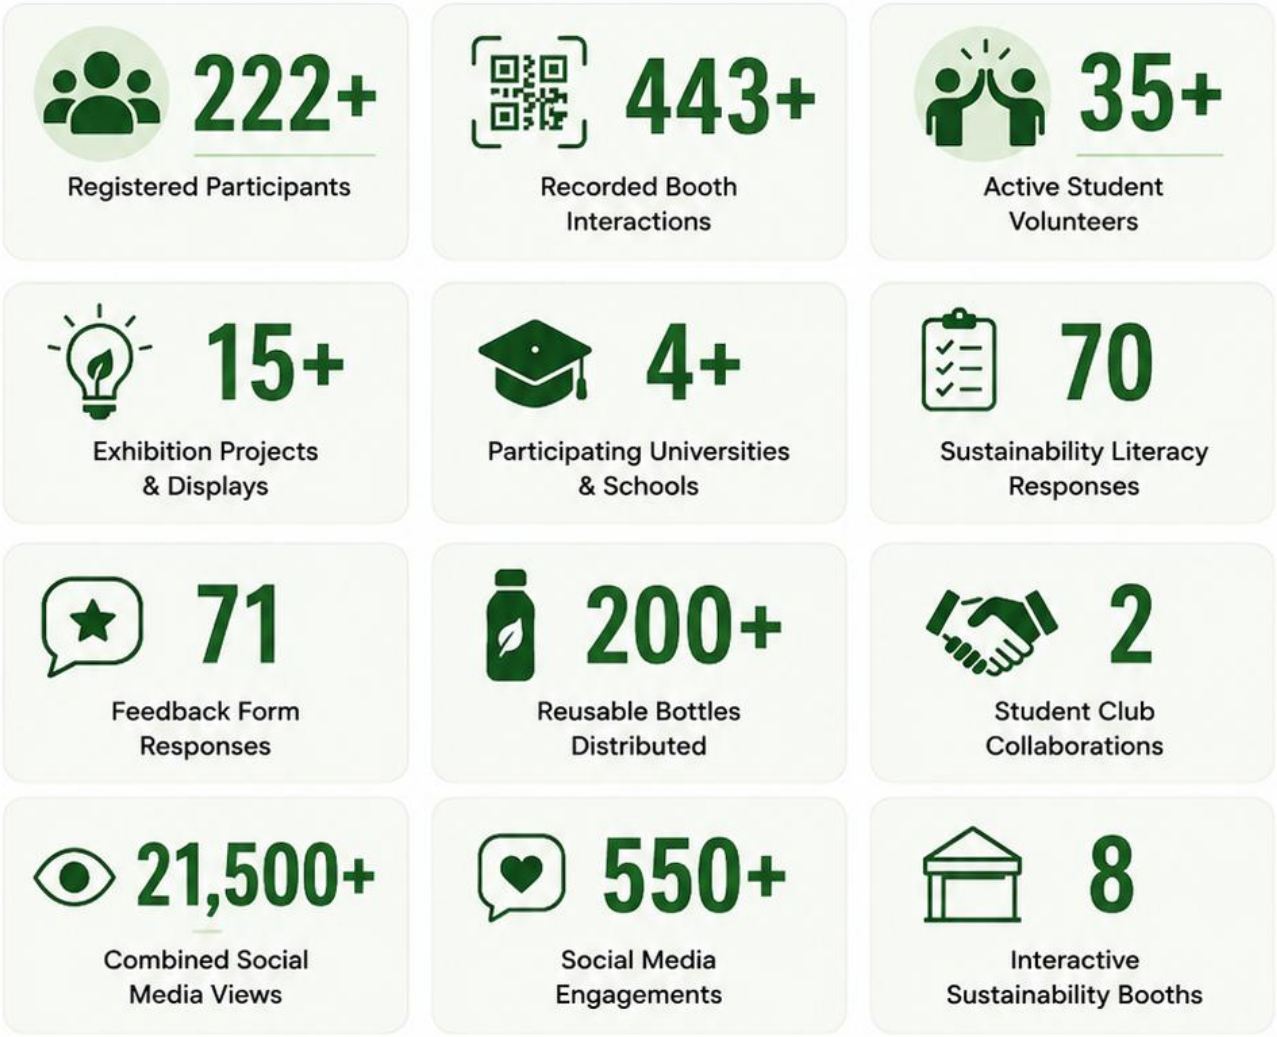

"Think Sustainability: From Idea to Impact" was a student-led sustainability engagement initiative organized by the UBT Sustainability Club at the University of Business & Technology (UBT) on May 11, 2026 at the UBT Corniche Campus.

The event was designed to transform sustainability awareness into an interactive and experience-driven campus initiative through gamified participation, hands-on activities, sustainability simulations, exhibitions, and interdisciplinary collaboration.

Rather than relying on traditional awareness methods, the event encouraged students to actively engage with sustainability topics through sustainability booths, digital participation systems, experiential activities, and real-world sustainability discussions connected to climate action, engineering, business, mental health, law, media literacy, and responsible consumption.

"Think Sustainability: From Idea to Impact" brought together students, universities, schools, collaborators, and sustainability-focused initiatives through interactive booths, exhibitions, digital participation systems, and experiential learning activities designed to strengthen sustainability literacy and student engagement within the UBT community.

1.2 Event at a Glance

Key Highlights

- QR-based digital loyalty card participation system
- Interactive climate simulation using the En-ROADS Climate Simulator
- Sustainability literacy assessment aligned with SDGs and PRME principles
- Interdisciplinary participation across all four UBT colleges
- Sustainability innovation exhibition featuring engineering, environmental, and creative projects
- Low-waste event practices through reusable rewards and digital-first communication
- Strong organic engagement across Instagram and TikTok campaigns

1.3 Why This Event Mattered

"Think Sustainability: From Idea to Impact" demonstrated how sustainability engagement within higher education can move beyond passive awareness campaigns into measurable, student-centered, and experience-driven participation.

Rather than relying solely on traditional informational approaches, the event encouraged students to actively engage with sustainability concepts through interactive learning, interdisciplinary collaboration, gamified participation systems, sustainability literacy activities, and real-world problem-solving experiences.

The initiative contributed to strengthening sustainability culture within the UBT community by combining environmental awareness, social responsibility, innovation, systems-thinking, and community participation within a single integrated experience.

Educational Impact	Community Impact	Operational Impact
• Strengthened sustainability literacy and systems-thinking • Encouraged experiential and application-based learning • Introduced students to climate action, ESG, circular economy, and responsible consumption concepts • Supported interdisciplinary sustainability education across multiple academic fields	• Brought together students, universities, schools, clubs, and external collaborators • Encouraged student leadership, teamwork, and volunteer engagement • Increased participation in sustainability-focused discussions and activities • Created a more interactive and accessible sustainability experience within the campus environment	• Implemented QR-based participation and digital engagement systems • Reduced paper usage through digital forms, loyalty cards, and certificates • Promoted reusable and low-waste reward systems • Demonstrated how sustainability principles can be integrated into event operations and participant experience design

The event also supported UBT's broader sustainability engagement efforts by contributing to sustainability literacy, community participation, interdisciplinary collaboration, and student-led sustainability initiatives aligned with SDGs, PRME principles, and institutional sustainability goals.

2. EVENT EXPERIENCE & TIMELINE

"Think Sustainability: From Idea to Impact" was intentionally designed as an interactive and experience-driven sustainability event rather than a traditional awareness campaign.

The event combined educational booths, sustainability exhibitions, interdisciplinary activities, digital participation systems, and gamified engagement to encourage students to actively explore sustainability concepts through hands-on participation and real-world discussions.

Participants moved through the event using a QR-based digital loyalty card system designed to increase engagement across multiple sustainability booths and activities.

The event experience was structured around three main participation areas:

- Interactive Sustainability Booths
- Exhibition Projects & Displays
- Central Prize & Reward Area

Participants registered through the QR participation system and collected digital stamps by completing booth activities and sustainability challenges throughout the event.

2.1 Participant Journey

2.2 QR-Based Participation & Gamification

A QR-based digital loyalty card system was implemented to support participant engagement and reduce paper usage during the event.

Participants collected digital stamps by completing sustainability-related activities across different booths. After completing the required number of activities, participants redeemed rewards including reusable bottles, plants, and sustainability-themed gifts.

The gamified structure encouraged:

- active participation,
- interdisciplinary interaction,
- sustainability literacy,
- and continued engagement throughout the event.

The system also supported measurable participation tracking through recorded booth interactions and QR scans.

2.3 Low-Waste Event Design

The event incorporated several low-waste operational practices through the use of:

- digital participation systems,
- QR-based engagement,
- reusable rewards,
- digital certificates,
- and reduced printed materials.

The reward system emphasized sustainability-centered items including reusable bottles, reusable cups, tote bags, plants, and environmentally conscious products aligned with the event's sustainability objectives.

2.4 Planning, Collaboration & Execution

Planning and preparation for Sustainability Day 2026 involved extensive coordination between student volunteers, university collaborators, external partners, and participating institutions.

The final event brought together:

- 35+ student volunteers,
- 4+ participating universities and schools,
- student clubs and external collaborators,
- and 15+ sustainability-focused exhibition projects and displays.

Preparation activities included booth development, sustainability activity planning, exhibition preparation, volunteer coordination, participant registration setup, and event branding.

2.5 Event Timeline

Pre-Event Phase (April 28 – May 10)	**Event Day** (May 11)	**Post-Event Follow-Up** (May 11 – May 15)
• Sustainability planning and activity development • Collaboration outreach to universities and partners • Volunteer recruitment and coordination • QR participation system preparation • Social media campaign launch • Exhibition and booth preparation	• Venue and booth setup • Participant registration and QR activation • Sustainability booth activities and exhibitions • Reward distribution and engagement activities • Photography, media coverage, and participant interaction	• Participant feedback collection • Sustainability literacy response review • Social media recap and documentation • Event reflection and reporting preparation

3. PRE-EVENT AWARENESS CAMPAIGN

Leading up to "Think Sustainability: From Idea To Impact," the UBT Sustainability Club implemented a student-led digital awareness campaign focused on increasing event visibility, encouraging participation, recruiting volunteers, and building excitement around sustainability engagement on campus.

The campaign primarily relied on organic digital outreach strategies rather than printed promotional materials, aligning with the event's broader sustainability goals of reducing unnecessary paper usage and encouraging digital interaction.

Promotion was carried out mainly through:

- Instagram campaigns,
- TikTok content,
- Instagram story engagement,
- WhatsApp group outreach,
- digital posters with QR codes,
- and collaborative student sharing across university communities.

The campaign combined short-form videos, countdown stories, event posters, booth previews, sustainability-themed content, and interactive promotional materials designed to build anticipation leading up to the event.

The campaign strategy focused primarily on digital engagement methods rather than printed promotional materials, aligning with the event's broader sustainability objectives and low-waste approach.

3.1 Social Media & Community Outreach

Instagram and TikTok served as the primary platforms used throughout the campaign period.

Content published during the campaign included:

- countdown stories,
- teaser posts,
- booth activity previews,

- volunteer recruitment content,
- sustainability-focused short-form videos,
- event reminders,
- and behind-the-scenes preparation content.

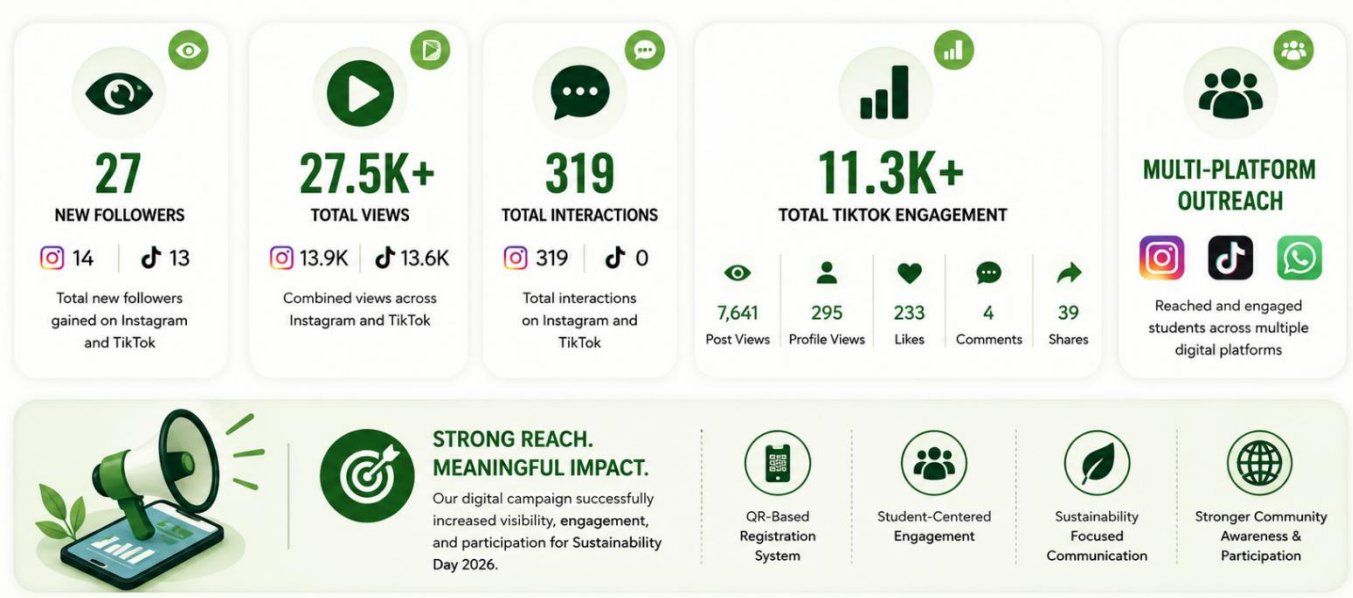

Student community outreach was additionally supported through WhatsApp group sharing, student-led promotion, collaborator reposts, and university community engagement channels.

3.2 Campaign Objectives

The awareness campaign aimed to:

- increase event visibility and participation,
- strengthen sustainability engagement before the event,
- promote digital and low-waste communication methods,
- encourage interdisciplinary participation and collaboration,
- and build anticipation leading up to Sustainability Day 2026.

3.3 Campaign Performance Highlights

3.4 Visual Campaign Showcase

The Sustainability Day 2026 campaign utilized a combination of promotional posters, countdown stories, short-form TikTok and Instagram videos, booth previews, volunteer recruitment content, and interactive behind-the-scenes updates to increase student engagement and event visibility across campus and online platforms.

The campaign focused primarily on digital-first outreach methods to support low-waste event communication while creating a recognizable and student-centered visual identity for the event. Content was designed to build anticipation, encourage participation, showcase sustainability activities, and provide accessible event information through social media platforms.

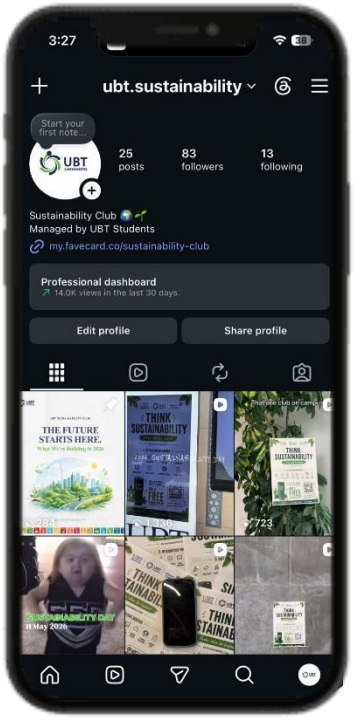

3.4.1 Countdown Story Series

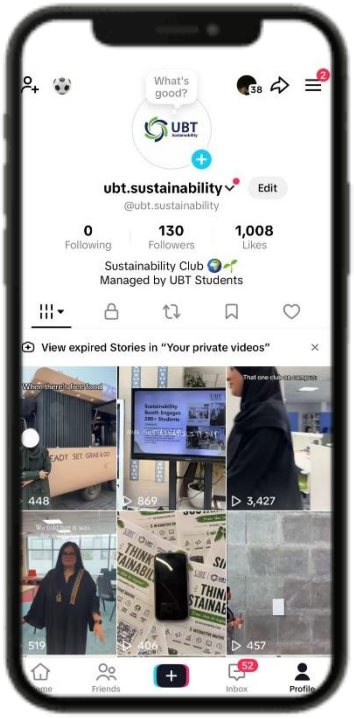

Daily countdown stories were used to build anticipation and maintain consistent student engagement leading up to Sustainability Day 2026.

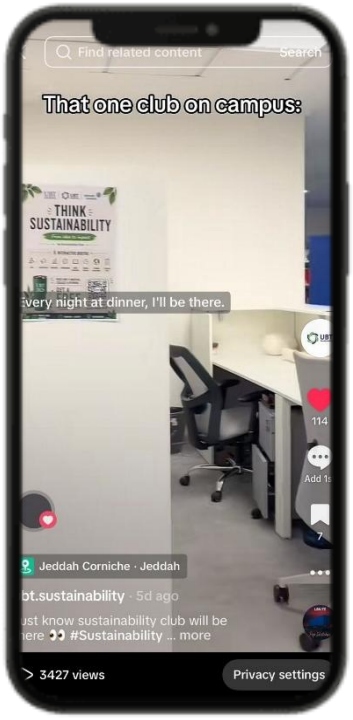

3.4.2 Instagram & TikTok Reach Overview

Campaign performance across Instagram and TikTok demonstrated strong organic reach, student interaction, and digital engagement throughout the promotional period.

3.4.3 Main Event Poster Campaign

The primary event poster introduced the event identity, participation system, booth experience, and sustainability reward concept.

3.4.4 Behind-the-Scenes & Interactive Story Content

Interactive stories and behind-the-scenes content were used to showcase booth preparation, volunteer coordination, and real-time event setup activities.

3.4.5 WhatsApp Community Outreach

The event poster was widely shared across WhatsApp community groups and student communication channels to increase event awareness, participant registration, and student engagement prior to the event. The campaign supported rapid digital outreach across different colleges, student communities, and university networks.

4. SUSTAINABILITY BOOTHS

A central component of Sustainability Day 2026 was the series of interactive sustainability booth awareness into hands-on participation and experience-driven learning.

4.1 Carbon Lab Booth

Exploring Climate Action Through Interactive Learning & Climate Simulation

The Carbon Lab Booth was one of the most engaging and highly attended areas during Sustainability Day 2026, attracting continuous crowds and participant interaction throughout the event. Designed to make climate education more practical, visual, and interactive, the booth combined sustainability gaming, systems thinking, and real-time climate modeling to help participants better understand the causes and consequences of climate change.

The booth featured two main experiences:

- an SDG-themed climate board game based on the United Nations “Go Goals!” educational initiative,
- and a live carbon emissions simulation activity using the internationally recognized En-ROADS Climate Simulator developed by Climate Interactive and MIT Sloan School of Management.

4.1.1 SDG Climate Board Game

One of the main attractions within the booth was the SDG Climate Board Game, an interactive sustainability activity inspired by the United Nations "Go Goals!" game created by the United Nations Regional Information Centre (UNRIC).

The game introduced participants to the 17 Sustainable Development Goals (SDGs) through collaborative gameplay, sustainability challenges, and climate-focused discussion. Participants moved across a large SDG-themed game board by rolling dice and answering sustainability-related questions connected to environmental and social issues.

Questions covered topics such as:

- renewable energy,
- climate inequality,
- food waste,
- greenhouse gases,
- water scarcity,
- fast fashion,
- circular economy principles,
- sustainable cities,
- and climate policy.

The activity became one of the busiest attractions of the event, with approximately 40 participants taking part in nearly 20 full games played in pairs throughout the day. The competitive and social nature of the game created a highly energetic atmosphere around the booth and encouraged participants to continue discussing sustainability topics even after finishing the activity.

Beyond engagement, the game successfully helped participants connect the SDGs to real-world systems and everyday decisions, making sustainability concepts feel more relatable, accessible, and actionable.

9 INDUSTRY, INNOVATION AND INFRASTRUCTURE

4.1.2 En-ROADS Climate Simulator Experience

Alongside the board game, the Carbon Lab Booth also featured a live climate simulation experience using the En-ROADS Climate Simulator developed by Climate Interactive and MIT Sloan School of Management. Displayed on a large digital screen, the simulator allowed participants to visually explore how global systems such as transportation, renewable energy, agriculture, waste, industry, and energy efficiency influence greenhouse gas emissions and future temperature rise.

Unlike traditional awareness activities focused only on theory, the simulator enabled participants to experiment with climate solutions in real time through interactive policy controls and adjustable sustainability scenarios. Participants immediately observed how different environmental decisions affected future emissions trends and projected warming by the year 2100.

The simulator interface displayed:

- projected temperature increase,
- global emissions trends,
- energy source transitions,
- and the long-term impact of policy and behavioral changes.

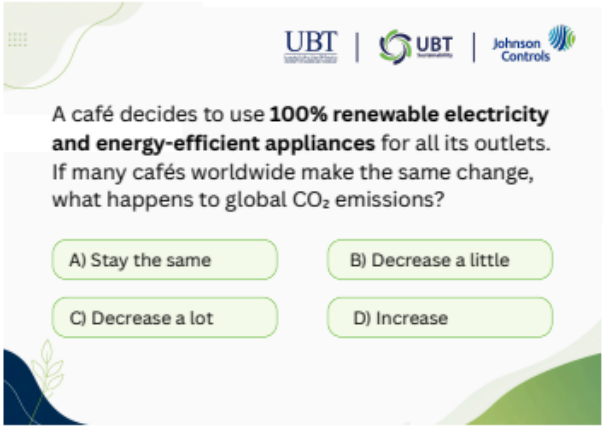

To increase interaction, participants selected scenario envelopes containing real-world sustainability situations prepared specifically for the event. Example scenarios included:

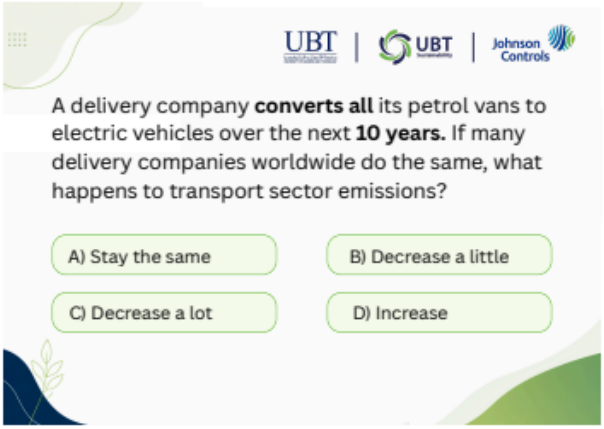

- cafés switching to renewable energy,
- delivery companies electrifying vehicle fleets,
- universities adopting plant-based catering,
- offices implementing energy-efficient systems,
- increased air travel,
- and the environmental impact of single-use plastics.

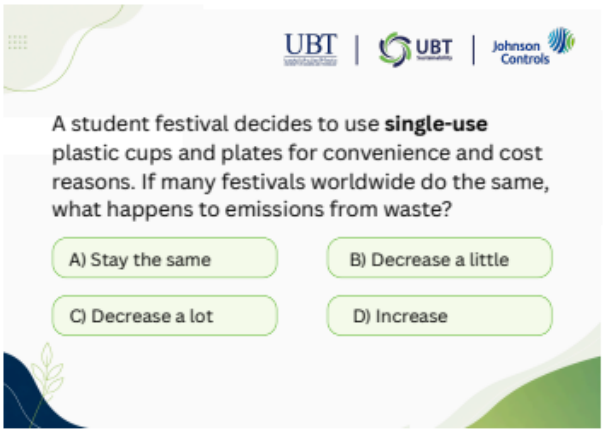

Participants were first asked to predict how the scenario would affect global CO_2 emissions. Facilitators then adjusted the corresponding controls within the En-ROADS simulator live on screen, allowing participants to immediately observe how those decisions changed emissions levels and projected temperature rise.

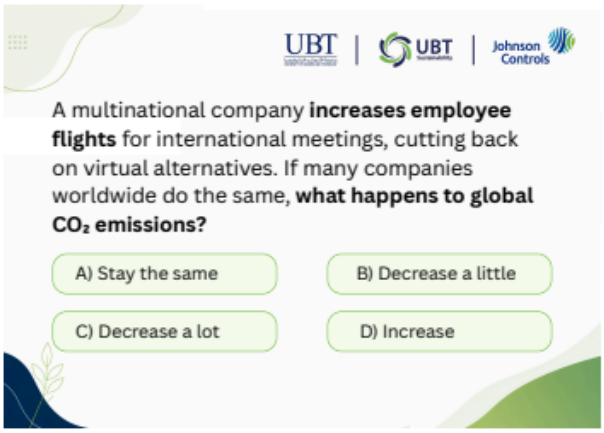

The visual and data-driven nature of the simulation helped simplify complex climate systems while encouraging systems-thinking by demonstrating how environmental challenges are interconnected across energy, transportation, food systems, infrastructure, and consumption patterns. Many participants remained at the booth to compare outcomes between scenarios, discuss climate solutions, and continue experimenting with different sustainability strategies.

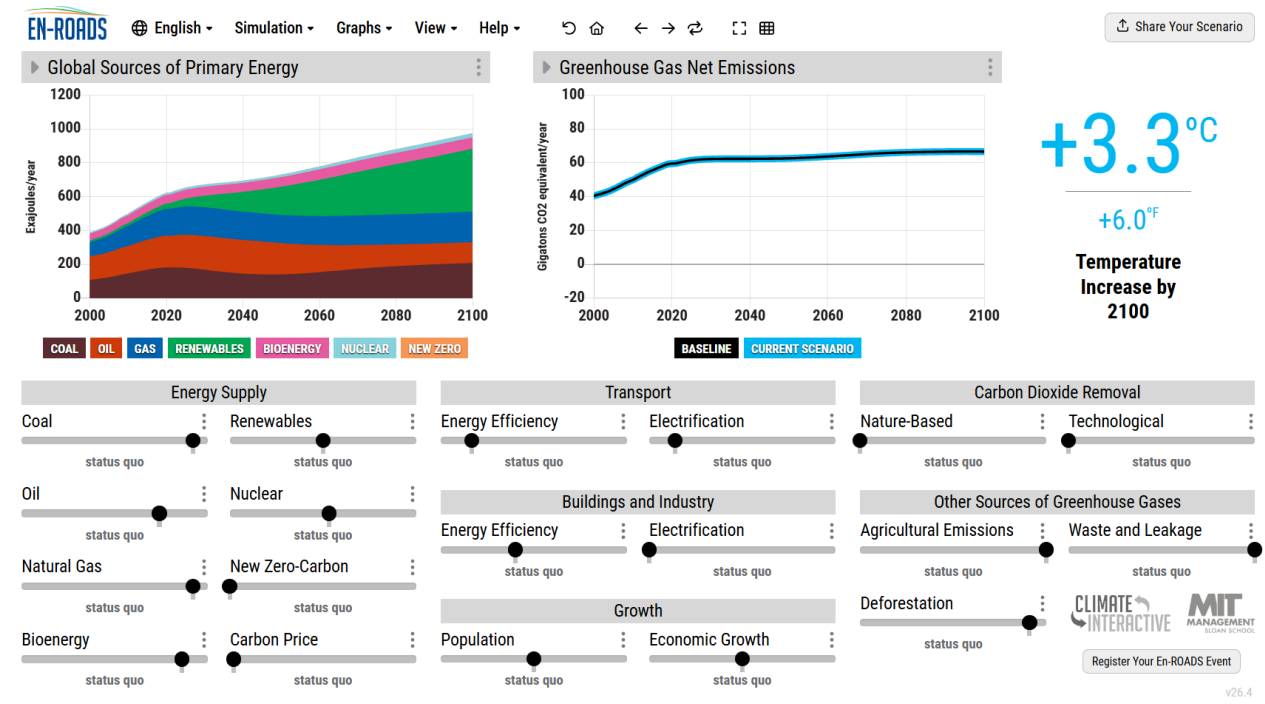

Why En-ROADS Was Used? The En-ROADS Climate Simulator is internationally recognized as a climate education and policy exploration tool used by universities, organizations, and climate workshops worldwide. The platform was selected because it transforms abstract climate science into an accessible and interactive learning experience supported by real-world climate modeling.

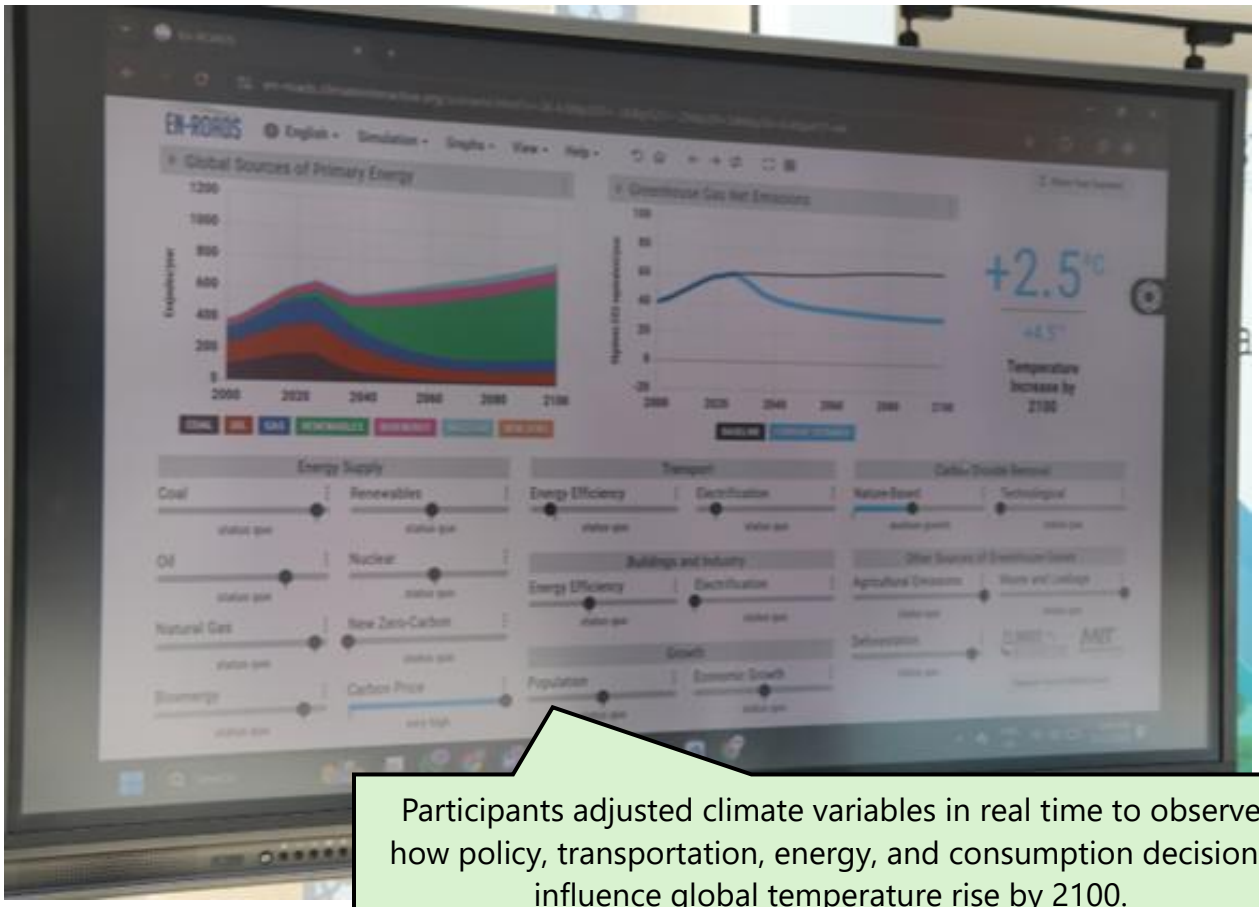

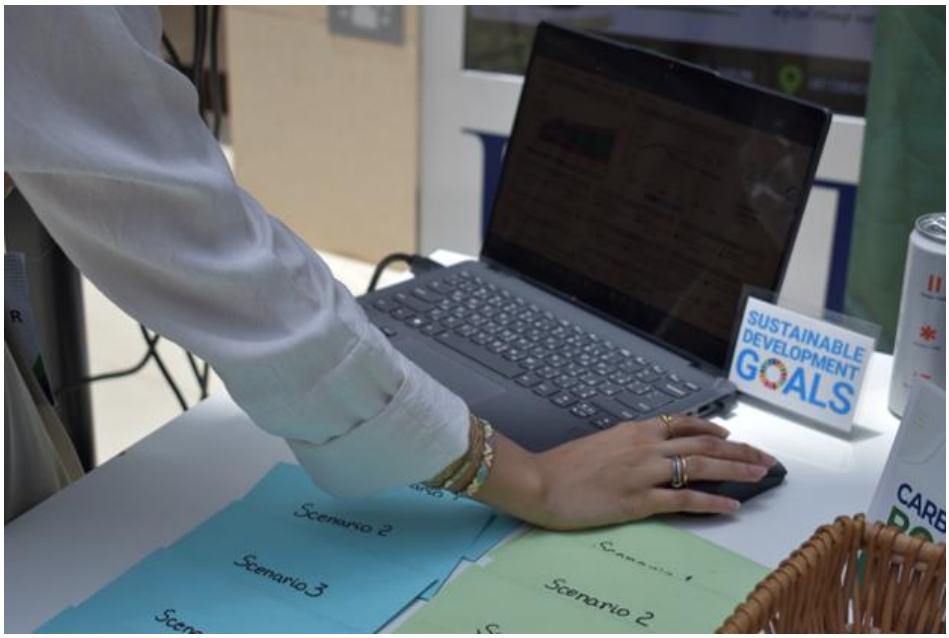

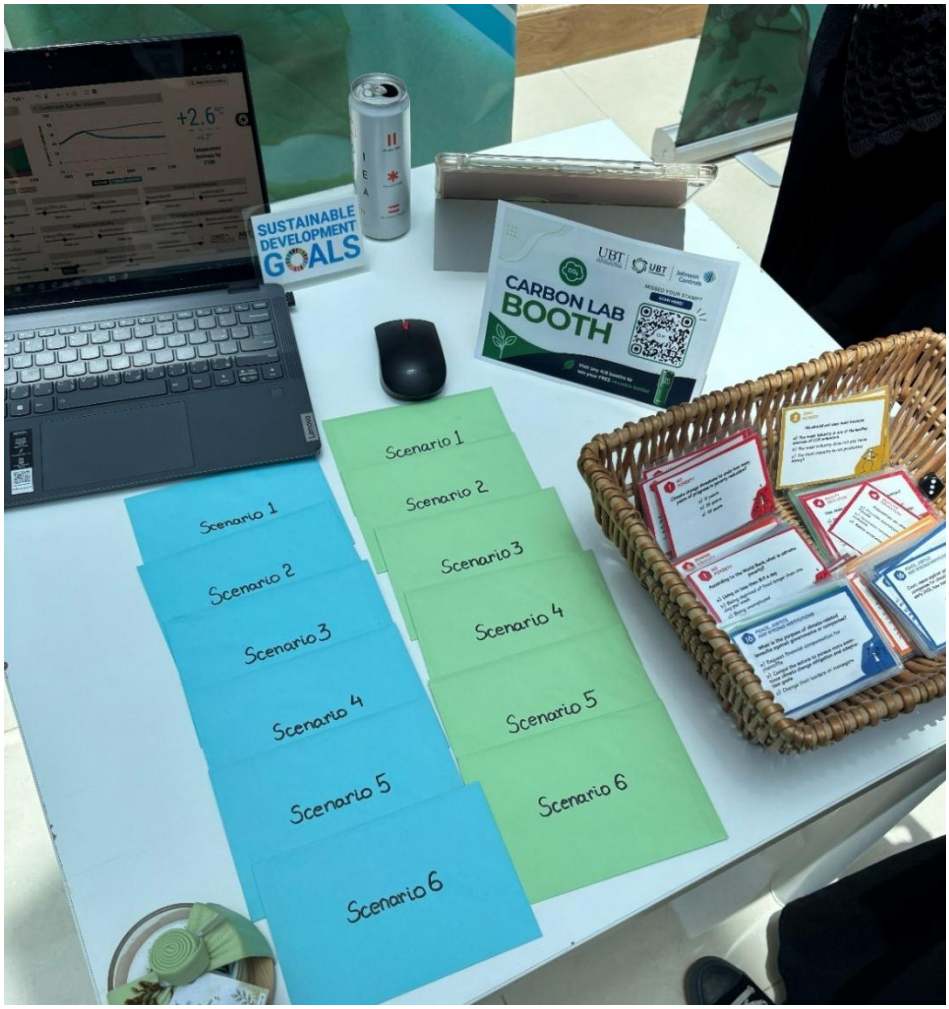

Participants adjusted climate variables in real time to observe how policy, transportation, energy, and consumption decisions influence global temperature rise by 2100.

4.2 Engineering Booth

Repair or Replace? – Understanding Sustainability Through Engineering Decisions

The Engineering Booth introduced participants to sustainability through an interactive activity focused on electronic waste, product lifespan, and responsible consumption. Through a hands-on "Repair or Replace?" challenge, participants explored how everyday engineering and consumer decisions impact waste generation, resource use, and environmental sustainability.

Participants were presented with real-world scenarios involving damaged electronics and appliances such as:

- broken charging cables,
- damaged gaming controllers,
- malfunctioning laptops,
- missing keyboard keys,
- damaged printers,
- worn electronic accessories,
- and defective wireless earbuds.

Using interactive "Repair" and "Replace" decision bins, participants selected what they believed was the more sustainable option for each scenario. The activity encouraged discussion around:

- electronic waste (e-waste),
- circular economy principles,
- product lifecycle thinking,
- resource conservation,
- sustainable engineering design,
- repair culture,
- and responsible technology consumption.

Rather than presenting sustainability only through environmental theory, the booth translated engineering sustainability into practical everyday choices familiar to students.

Participants explored how repairing products can:

- extend product lifespan,
- reduce unnecessary waste,
- conserve manufacturing energy,
- and minimize environmental impact.

This balance helped participants understand that sustainable engineering decisions often involve systems-thinking rather than simple “right or wrong” answers. The booth generated strong engagement due to its hands-on format and relatable scenarios involving commonly used student technology and electronics. Many participants actively debated their choices and discussed how modern consumer habits contribute to growing e-waste challenges globally.

4.3 Law Booth

Sustainability Courtroom: *You Be the Judge*

The Law Booth transformed sustainability awareness into an interactive courtroom-style experience where participants explored how environmental laws and regulations apply to real-world situations within Saudi Arabia.

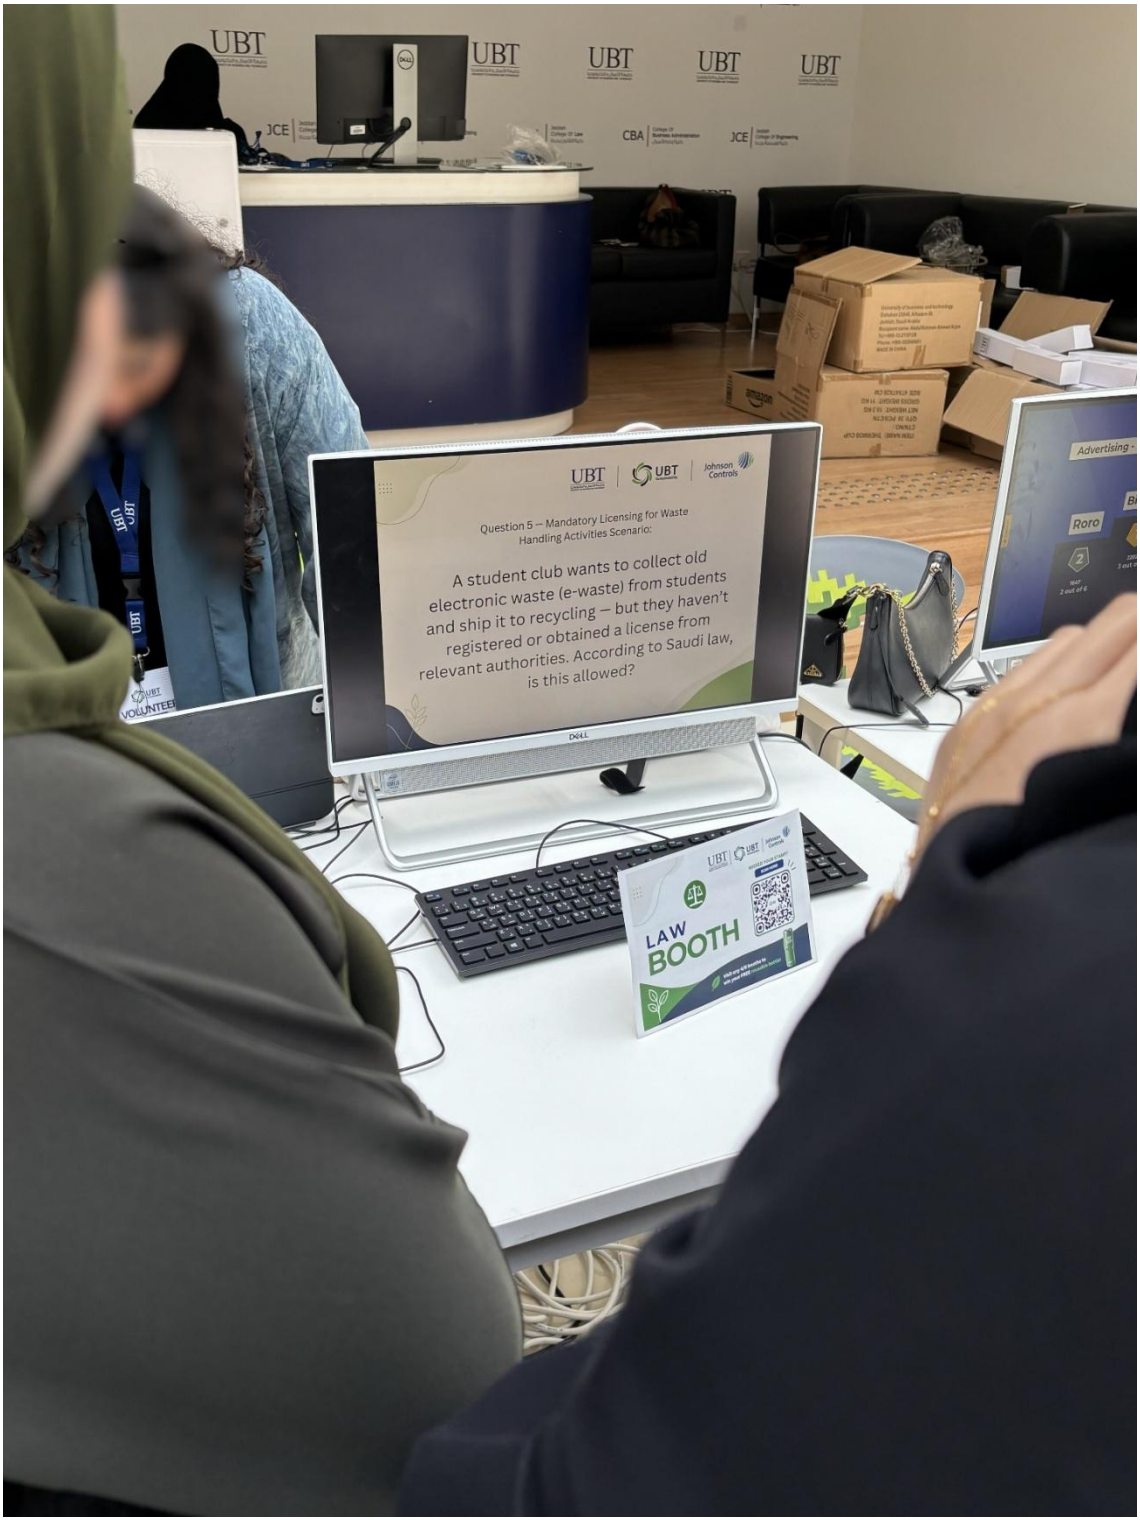

Through the activity "You Be the Judge: Guilty or Not Guilty?", participants reviewed sustainability-related case scenarios and decided whether each situation violated environmental regulations, encouraging discussion around legal responsibility, environmental ethics, and accountability.

Scenarios included:

- illegal waste disposal,
- improper handling of hazardous materials,
- unauthorized tree removal,
- unlicensed e-waste collection,
- public littering,
- and waste-burning practices.

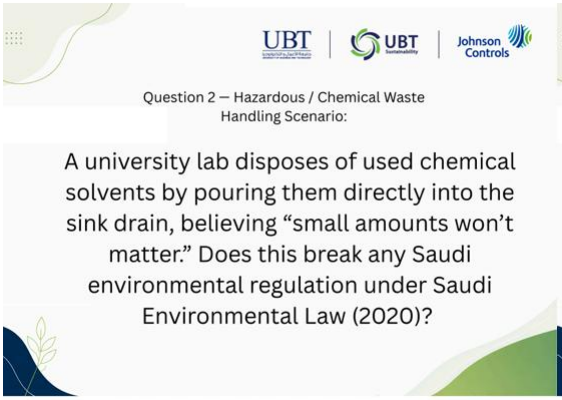

The activity introduced students to environmental governance and sustainability law in an accessible and engaging format while encouraging critical thinking and legal interpretation through interactive participation.

By combining sustainability education with legal analysis and discussion-based learning, the booth demonstrated how environmental protection is closely connected to policy, regulation, and community responsibility.

UBT
Question 5 – Mandatory Licensing for Waste Handling Activities Scenario:
A student club wants to collect old electronic waste (e-waste) from students and ship it to recycling – but they haven't registered or obtained a license from relevant authorities. According to Saudi law, is this allowed?
LAW BOOTH

YOU BE THE JUDGE GAME:
GUILTY OR NOT GUILTY?

Question 1 — Waste Disposal Violation Scenario:
A dorm student throws leftover food waste and plastic bottles into a regular trash bag instead of designated recycling / waste-sort bins, then leaves them in a public campus area overnight. Is this behaviour allowed under the Saudi Waste Management Law (2021)?

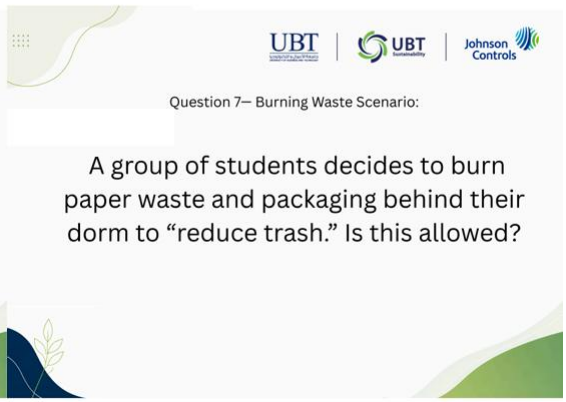

Question 2 — Hazardous / Chemical Waste Handling Scenario:
A university lab disposes of used chemical solvents by pouring them directly into the sink drain, believing "small amounts won't matter." Does this break any Saudi environmental regulation under Saudi Environmental Law (2020)?

Question 3 — Tree/Covered-Vegetation Protection Scenario:
A student association clears several mature trees near campus housing to build extra seating without obtaining official permission. Under Saudi Environmental Law, is tree removal without a permit legal?

Question 4 — Illegal Waste Dumping from Vehicles/Buildings Scenario:
Someone throws an empty soda can out of their car window onto a public campus walkway. Is this offence punishable under Saudi waste laws or regulations?

Question 5 — Mandatory Licensing for Waste Handling Activities Scenario:
A student club wants to collect old electronic waste (e-waste) from students and ship it to recycling — but they haven't registered or obtained a license from relevant authorities. According to Saudi law, is this allowed?

Question 6— Construction Waste Dumping Scenario:
A student renovates their apartment and dumps leftover construction debris in an empty lot near campus instead of using an approved disposal site. Is this allowed in Saudi Arabia?

Question 7— Burning Waste Scenario:
A group of students decides to burn paper waste and packaging behind their dorm to "reduce trash." Is this allowed?

4.4 Advertising Booth

Greenwashing Detector Lab – Building Critical Awareness Around Sustainability Marketing

The Advertising Booth featured the "Greenwashing Detector Lab," an interactive Kahoot-based activity designed to strengthen critical thinking around sustainability marketing and environmental advertising claims. Using a live digital Kahoot quiz displayed on a large screen, participants tested their ability to distinguish between genuine sustainability efforts and misleading environmental claims commonly associated with greenwashing.

Participants were presented with real-world inspired sustainability scenarios and marketing statements related to:

- eco-friendly branding,
- recycled materials,
- carbon neutrality claims,
- plastic reduction commitments,
- sustainability certifications,
- and environmental advertising language.

Participants analyzed each scenario and selected whether the statement represented genuine sustainability action or potential greenwashing. The activity encouraged students to evaluate:

- transparency,
- data credibility,
- certification validity,
- measurable environmental impact,
- and accountability within sustainability communication.

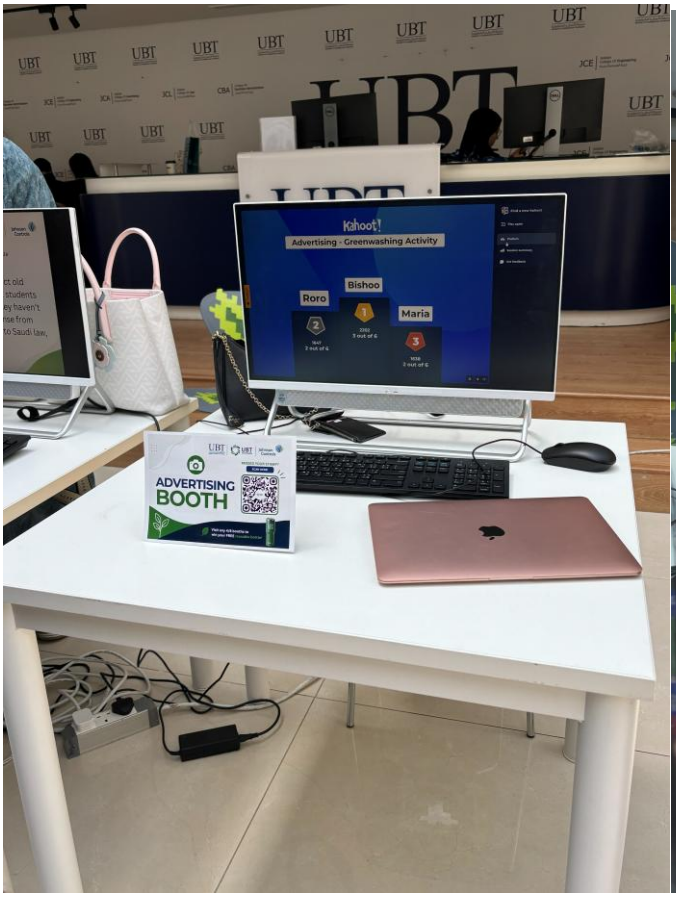

Questions also explored how trustworthy sustainability claims often rely on:

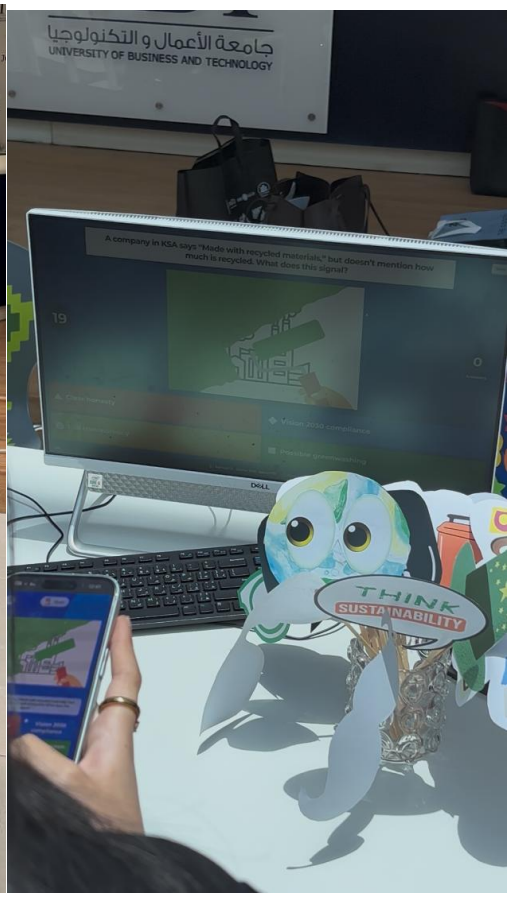

- verified environmental data,
- lifecycle analysis,
- third-party certifications,

- and transparent reporting practices rather than vague environmental language or visual branding alone.

The competitive and interactive format of the Kahoot activity created strong participant engagement while making complex concepts surrounding sustainability communication more accessible and memorable.

Beyond awareness, the booth emphasized the growing importance of media literacy, ethical communication, and responsible advertising within sustainability-related industries.

Which of these is an example of greenwashing?
LOVE YOUR PLANET
▲ Reducing carbon emissions
◆ Claiming "eco-friendly" with no proof ✓
● Using recycled packaging
■ Publishing a sustainability report

What makes a sustainability claim trustworthy?
PEOPLE DO.
▲ Verified data or certification ✓
◆ Pretty green logos
● Emotional words
■ Celebrity endorsement

A company in KSA says "Made with recycled materials," but doesn't mention how much is recycled. What does this signal?
RECYCLE
▲ Clear honesty
◆ Vision 2030 compliance
● Full transparency
■ Possible greenwashing ✓

What is a sign that a company may be greenwashing?
THAT'S GREEN WASHING
▲ Gives clear lifecycle analysis
◆ Publishes verified carbon reports
● Uses vague words like "planet-safe" with no proof ✓
■ Has third-party certifications

A company in KSA claims they are "Plastic-Free by 2030" but continues to release new single-use plastic.
SAY NO to plastic
▲ Long-term planning
◆ Greenwashing ✓
● True sustainability
■ Government-approved progress

4.5 Business Booth

Cost vs Sustainability Trade-Off Game – Exploring Responsible Decision-Making in Business

The Business Booth featured the "Cost vs Sustainability Trade-Off Game," an interactive activity designed to help participants explore how businesses balance financial considerations with environmental and social responsibility.

Through realistic business and campus-based scenarios, participants analyzed operational decisions and discussed whether each choice prioritized short-term cost savings or long-term sustainability impact.

Scenarios explored topics such as:

- renewable energy investments,
- biodegradable packaging,
- transportation systems,
- water consumption,
- sustainable event planning,
- and environmentally friendly operational practices.

Examples included:

- cafés choosing biodegradable containers despite higher costs,
- organizations delaying solar investments due to upfront expenses,
- event organizers relying on bottled water for convenience,
- and clubs implementing carpool systems to reduce emissions.

The activity encouraged systems-thinking by demonstrating that sustainable business decisions often involve balancing environmental impact, operational practicality, financial limitations, and long-term organizational responsibility.

The booth also introduced participants to broader concepts related to ESG, responsible leadership, sustainable operations, and long-term value creation within business environments.

By connecting sustainability directly to realistic business operations and everyday organizational decisions, the booth helped make sustainable decision-making more

practical and relatable for students interested in business, entrepreneurship, and management.

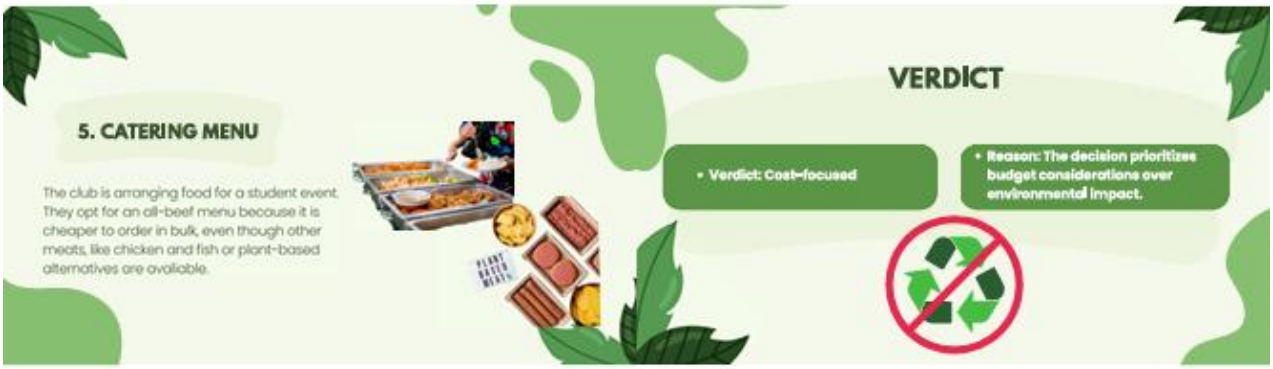

UBT
Sustainability
COST
vs
SUSTAINABILITY
TRADE OFF GAME
SUSTAINABLE
HOW TO PLAY?
Read each scenario carefully and decide whether the business or student organization made a cost-focused choice or, a sustainability-focused choice

1. CAMPUS CAFÉ PACKAGING
A student-run café chooses biodegradable takeout containers (higher cost) instead of cheap single-use plastic boxes to reduce environmental impact.
VERDICT
• Verdict: Sustainability-focused
• Reason: The primary goal is reducing environmental impact, even at a higher cost.

2. RENEWABLE ENERGY FOR ROOMS
The office consumes a lot of electricity each month and considers installing a small solar panel system. After assessing the upfront cost and potential savings, the club decides to continue using the existing electricity setup rather than investing in solar panels.
VERDICT
• Verdict: Cost-focused
• Reason: The decision prioritizes saving money over reducing carbon emissions.

3. BOTTLED WATER AT EVENT
A student festival is planning to provide water for 500 participants. While reusable water dispensers could reduce waste, the organizers choose to provide bottled water because it is easier to manage and requires less setup.
VERDICT
• Verdict: Cost-focused
• Reason: The decision emphasizes convenience and cost savings rather than sustainability.

4. STAFF TRANSPORTATION
The club hires part-time student assistants who need to commute to the office daily. To reduce fuel consumption and emissions, the club organizes a carpool system, even though it requires more coordination among students.
Carpool
VERDICT
• Verdict: Sustainability-focused
• Reason: The decision emphasizes reducing carbon emissions rather than convenience.

5. CATERING MENU
The club is arranging food for a student event. They opt for an all-beef menu because it is cheaper to order in bulk, even though other meats, like chicken and fish or plant-based alternatives are available.
VERDICT
• Verdict: Cost-focused
• Reason: The decision prioritizes budget considerations over environmental impact.

6. CAMPUS GARDEN PLANTS
The gardening club is planting a new campus garden. They choose native, drought-resistant plants over imported exotic species, even though the latter would have been cheaper, to ensure long-term bio-diversity and low water usage.
VERDICT
• Verdict: Sustainability-focused
• Reason: The decision emphasizes environmental suitability and water conservation over cost.

7. CLEANING SUPPLIES FOR CLUB ROOM
The club needs cleaning products for their office and considers several options. They decide to purchase eco-friendly cleaning products, which are more expensive than standard chemicals.
VERDICT
• Verdict: Sustainability-focused
• Reason: The decision prioritizes environmental and health benefits over short-term cost savings.

4.6 Book Exchange Booth

The Book Exchange Booth was organized in collaboration with the UBT Book Club as a community-driven initiative focused on promoting reuse culture, sustainable consumption, and knowledge sharing within the university community. Built around the concept of "exchange instead of waste," the booth encouraged participants to bring previously owned books and exchange them for different titles shared by other students. The activity highlighted how sustainability can be integrated into everyday habits through reuse, accessibility, and mindful consumption. Participants explored donated books across different genres while engaging in conversations around reading, sustainability, education, and community interaction. The exchange format created a welcoming and highly social environment that encouraged interaction between students from different backgrounds and disciplines. The booth also reinforced circular economy principles by demonstrating how resources can continue providing value through reuse and redistribution rather than disposal. Beyond promoting sustainable consumption, the initiative supported literacy, accessibility, and community engagement by allowing students to access new reading materials without additional cost. The collaboration with the UBT Book Club demonstrated how student organizations can contribute to sustainability engagement through creative, accessible, and community-centered initiatives.

4.7 Mental Health & Wellbeing Booth

Breaking Stigma Through Wellbeing Awareness & Student Support

The Mental Health & Wellbeing Booth focused on promoting emotional wellbeing, self-awareness, and open conversations surrounding mental health within the university community.

Recognizing that sustainability extends beyond environmental issues alone, the booth highlighted the importance of social sustainability, emotional wellbeing, and healthy support systems as essential components of a sustainable and resilient society.

One of the key objectives of the booth was to challenge the common misconception that sustainability is limited only to recycling, waste, or environmental initiatives. Instead, the booth encouraged participants to explore the human and social dimensions of sustainability, particularly mental health, wellbeing, and community care.

Many participants expressed surprise at seeing mental health included within a sustainability-focused event, which created meaningful conversations around the relationship between sustainable communities and individual wellbeing. The activity helped reinforce the idea that sustainability also involves creating healthier, safer, and more supportive environments for people.

The booth was supported by a clinical specialist who engaged directly with participants, creating a safe and approachable space for discussions related to stress, emotional wellbeing, and mental health awareness. Students were encouraged to ask questions, seek guidance, and engage in informal conversations surrounding emotional health in a supportive environment.

In addition to awareness activities, the booth also promoted UBT's career counseling and student support services, helping students learn more about available university resources related to career guidance, personal development, and transition into the workforce. Informational materials and QR-based sign-ups for free group career counseling sessions were shared with participants as part of the initiative.

One of the main interactive elements within the booth was the "How Are You Feeling Today?" engagement board, where participants selected expressive emotion stickers to represent their current emotional state. The activity invited students to reflect on their

feelings while also normalizing emotional expression and mental health conversations within a public university setting.

The visual and anonymous nature of the activity encouraged high participation throughout the event and created a welcoming environment where students could engage comfortably and honestly.

As the board gradually filled with emotion stickers, it became a collective visualization of student wellbeing and emotional diversity across campus, reinforcing the importance of empathy, awareness, and supportive community spaces.

The booth demonstrated how simple interactive engagement methods can encourage emotional awareness while helping reduce stigma surrounding mental health discussions.

4.8 Sustainability Literacy Assessment Booth

Measuring Sustainability Awareness Through Interactive Assessment

The Sustainability Literacy Assessment Booth focused on evaluating and strengthening sustainability literacy within the UBT community through an interactive and research-informed assessment experience.

Participants completed the *UBT Sustainability Literacy Assessment (2025 Edition)*, a structured assessment developed by the UBT Sustainability Club and aligned with the United Nations Sustainable Development Goals (SDGs), UN PRME principles, and Saudi Vision 2030 priorities. The assessment introduced participants to sustainability literacy as the ability to understand environmental, social, economic, and ethical sustainability challenges while applying sustainability thinking within real-world contexts.

Questions explored topics related to:

- climate action,
- renewable energy,
- circular economy,
- ESG,
- ethical leadership,
- biodiversity,
- sustainability policy,
- responsible consumption,
- and Saudi Vision 2030.

The assessment structure was inspired by internationally recognized sustainability literacy frameworks such as Sulitest and PRME-aligned education models. Rather than focusing only on memorization, the activity incorporated:

- systems-thinking,
- application-based sustainability scenarios,
- reasoning,
- and ethical reflection.

Approximately 70 student responses were collected during Sustainability Day 2026, providing valuable baseline insights into sustainability awareness levels within the

university community while encouraging students to reflect on their own understanding of sustainability issues.

To further increase engagement, the booth included a competitive participation component where the top three participants achieving the highest assessment scores received sustainability and wellbeing-themed prize packages.

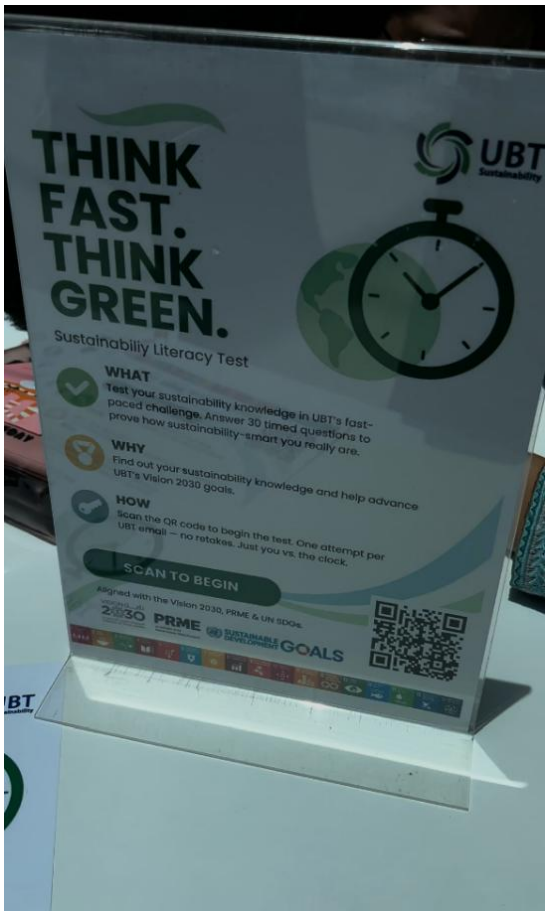

The prize sets included:

- reusable tote bags,
- reusable coffee cups,
- reusable water bottles,
- mental health journals,
- notebooks,
- journaling stickers,
- and self-care items.

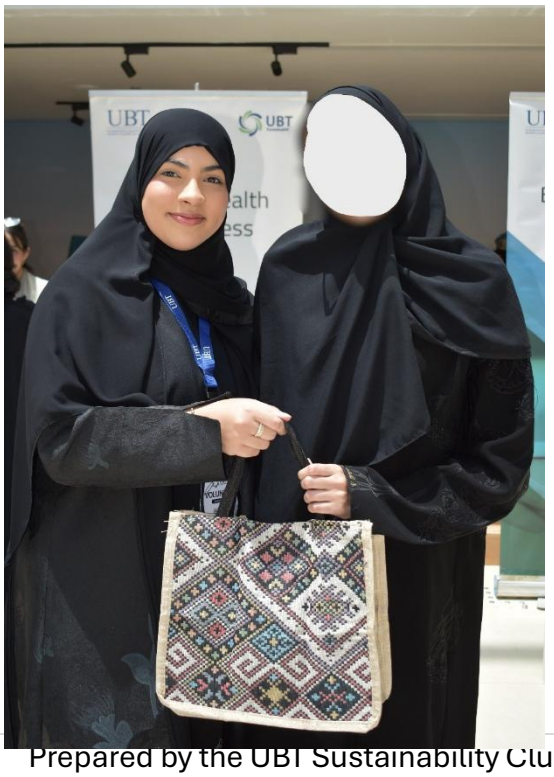

The rewards were intentionally selected to reinforce both sustainability and wellbeing themes while encouraging sustainable lifestyle habits and mindful daily practices.

Beyond awareness, the booth demonstrated how sustainability engagement within higher education can move beyond traditional campaigns into measurable educational impact, data-informed assessment, and reflective learning experiences.

5. PRIZE & REWARD BOOTH

Driving Sustainability Engagement Through Gamification & Interactive Participation

The Prize & Reward Booth served as the central engagement hub of Sustainability Day 2026, connecting event participation through a digital reward system designed to encourage sustainability engagement in a more interactive and accessible way.

To create a familiar and engaging participant experience, the event implemented a digital loyalty card system inspired by reward programs commonly used in cafés and retail applications. Upon registration, participants received a digital participation card containing five total stamps. The first stamp was awarded during sign-up, while the remaining four stamps were collected by participating in any four sustainability booths throughout the event.

Once all five stamps were completed, participants became eligible to redeem sustainability-focused rewards at the Prize Booth.

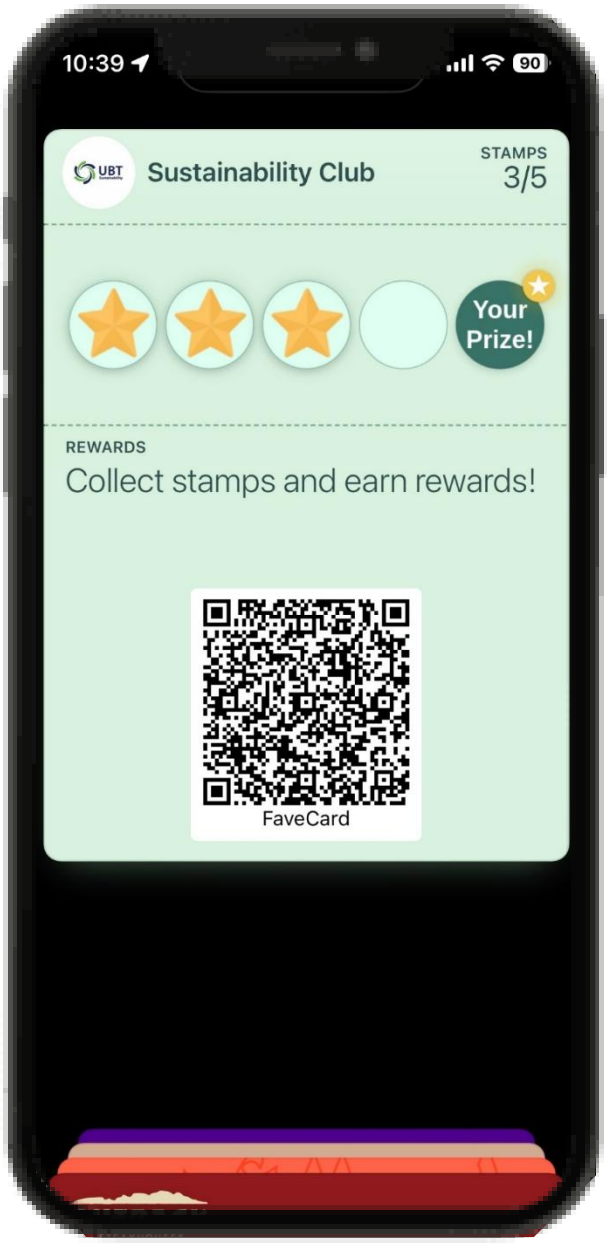

The rewards were intentionally selected to reinforce sustainability concepts beyond the event itself. Participants received reusable water bottles featuring sustainability-themed quotes attached using twine, encouraging reduction of single-use plastic consumption through practical everyday alternatives.

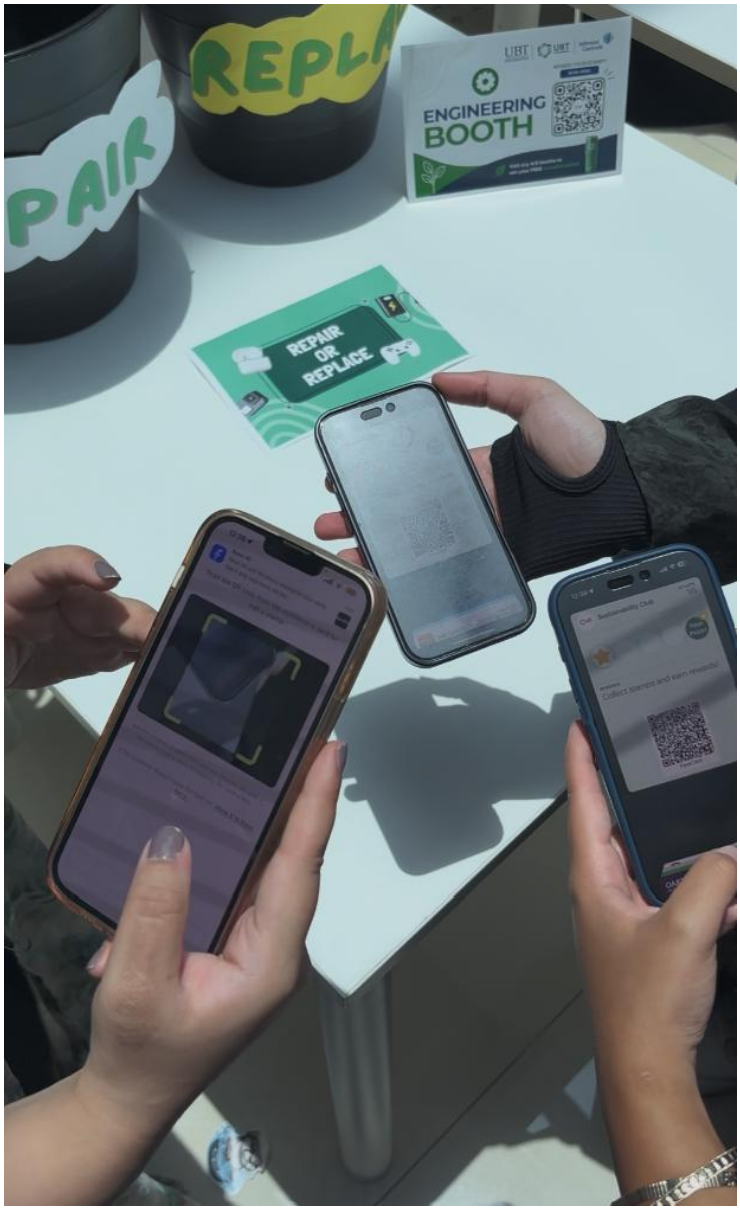

Participants also received small plants as symbolic sustainability giveaways intended to encourage longer-term environmental awareness, care, and personal responsibility beyond the duration of the event.

The booth additionally featured a collaboration with ZED Fresh Done Right, whose food truck provided complimentary food rewards for participants. The collaboration helped strengthen the event atmosphere while supporting a more community-centered sustainability experience. ZED was intentionally selected as a partner due to its sustainability-focused operational practices, including fresh sourcing approaches, reusable distribution bags, and broader themes connected to responsible consumption and operational sustainability.

Reusable ZED bags were additionally used during food distribution to support waste-conscious event practices and reduce reliance on disposable carrying materials.

The Prize & Reward Booth demonstrated how gamification and incentive-based engagement strategies can strengthen sustainability participation while making sustainability education more engaging, memorable, and community-oriented.

6. SUSTAINABILITY ACHIEVEMENTS

Showcasing Institutional & Student Sustainability Impact at UBT

As part of Sustainability Day 2026, a large self-playing digital slideshow exhibition was displayed throughout the event to showcase UBT's sustainability achievements, institutional commitments, student innovation projects, global recognitions, and sustainability-focused initiatives.

The exhibition was designed to demonstrate that sustainability at UBT extends beyond individual awareness campaigns and operates as a broader institutional ecosystem involving:

- research,
- innovation,
- education,
- partnerships,
- student engagement,
- and measurable sustainability impact.

The slideshow highlighted both institutional accomplishments and student-led initiatives connected to sustainability, climate action, renewable energy, responsible leadership, and innovation.

Featured achievements included:

- UBT's commitment to Net Zero by 2050 through the UN-backed Race to Zero initiative,
- UBT becoming the first private university in Saudi Arabia to join UN PRME,
- participation in QS Sustainability Rankings, THE Impact Rankings, and the UI GreenMetric Sustainability Index,
- recognition related to SDG 7 (Clean Energy) and SDG 12 (Responsible Consumption & Production),
- sustainability innovation initiatives including Hack4Earth and sustainability hackathons,
- Recycling Day and Arab Environment Day awareness initiatives,

- and student success stories such as winning 1st place in the Sustainability Track at LEAP 2024 for the AquaSensor project.

The exhibition also highlighted collaborations and partnerships with organizations including SPSA, Misk Foundation, Pristine Global, and L'Oréal.

Beyond awareness, the slideshow served as a motivational and engagement-focused component of the event by demonstrating how sustainability involvement can lead to:

- research opportunities,
- competitions,
- leadership experiences,
- innovation projects,
- global exposure,
- and measurable institutional impact.

Many students spent time viewing the slides between booth activities, creating discussions around sustainability achievements while increasing awareness of existing sustainability opportunities and initiatives across the university.

The exhibition reinforced the idea that sustainability is interdisciplinary in nature and connected to engineering, business, technology, research, operations, student leadership, and institutional strategy across the UBT community.

7. EXHIBITION AREA

Showcasing Innovation, Applied Sustainability & Inter-University Collaboration

The Exhibition Area served as one of the central highlights of Sustainability Day 2026, transforming sustainability concepts into visible, interactive, and application-based experiences. While the interactive booths focused primarily on engagement and participation, the exhibition area focused on showcasing innovation, engineering applications, environmental technologies, student creativity, and collaborative sustainability efforts from universities, schools, and partner institutions.

The exhibition brought together projects connected to:

- renewable energy,
- smart systems,
- environmental monitoring,
- recycling,
- sustainable design,
- health sciences,
- education,
- research,
- and responsible resource management.

Through prototypes, demonstrations, artistic displays, and research-based concepts, participants were able to experience sustainability not only as an environmental discussion, but as a multidisciplinary field connected to engineering, technology, education, design, health sciences, innovation, and community impact.

The exhibition also strengthened collaboration between institutions by bringing together contributions from:

- University of Business & Technology (UBT),
- King Saud bin Abdulaziz University for Health Sciences (KSAU-HS),
- Energy & Water Academy,
- Dar Al Rowad Model Schools,

Exhibition Highlights

- Applied engineering sustainability projects
- AI and IoT-based environmental systems
- Smart irrigation and environmental monitoring technologies
- Automated waste management concepts
- Sustainable fashion and recycling art displays
- SDG-focused educational engagement
- Inter-university collaboration and participation
- Award-winning innovation projects recognized internationally

7.1 UBT Engineering Student Projects

Smart Engineering & Sustainability Technologies

UBT engineering students showcased a collection of applied sustainability and technology projects developed under the supervision of Dr. Omar. The projects demonstrated how engineering, automation, sensors, IoT systems, and intelligent technologies can contribute toward solving environmental and operational challenges related to water usage, waste management, environmental monitoring, and automation.

One of the showcased projects focused on a **Smart Irrigation System**, designed to improve water efficiency through automated irrigation control. The system used a soil moisture sensor to monitor moisture levels in the soil and automatically activate a water pump only when irrigation was needed. Once the required moisture level was reached, the system automatically stopped the water flow to prevent overwatering. The project demonstrated how smart sensing technologies can support sustainable water consumption practices and reduce unnecessary water waste.

Another project explored a **CO_2 Monitoring and Irrigation System**, combining environmental sensing with IoT integration. The system monitored carbon dioxide levels in the surrounding environment and transmitted data through an IoT-based system when elevated levels were detected. In response, the system automatically activated irrigation functions while simultaneously generating notifications through a connected mobile application. The project demonstrated how environmental monitoring systems can support smarter and more responsive sustainability solutions.

Students also presented a **Robotic Arm Controlled Through Voice Commands**, highlighting the use of signal processing, automation, and machine learning concepts. The robotic arm responded to voice-based commands such as up, down, left, right, and pick through analog-to-digital signal conversion and command classification processes. While not directly an environmental project, the display demonstrated the broader role of intelligent automation systems in future sustainability-focused industrial and operational applications.

Another showcased project focused on **Automated Waste Management and Material Detection**. The system used ultrasonic sensors and inductive proximity sensing mechanisms to detect and classify materials such as metallic and non-metallic waste

objects. Automated movement mechanisms then guided materials through the sorting process. The project highlighted how sensor-based automation can contribute to more efficient recycling and waste management systems.

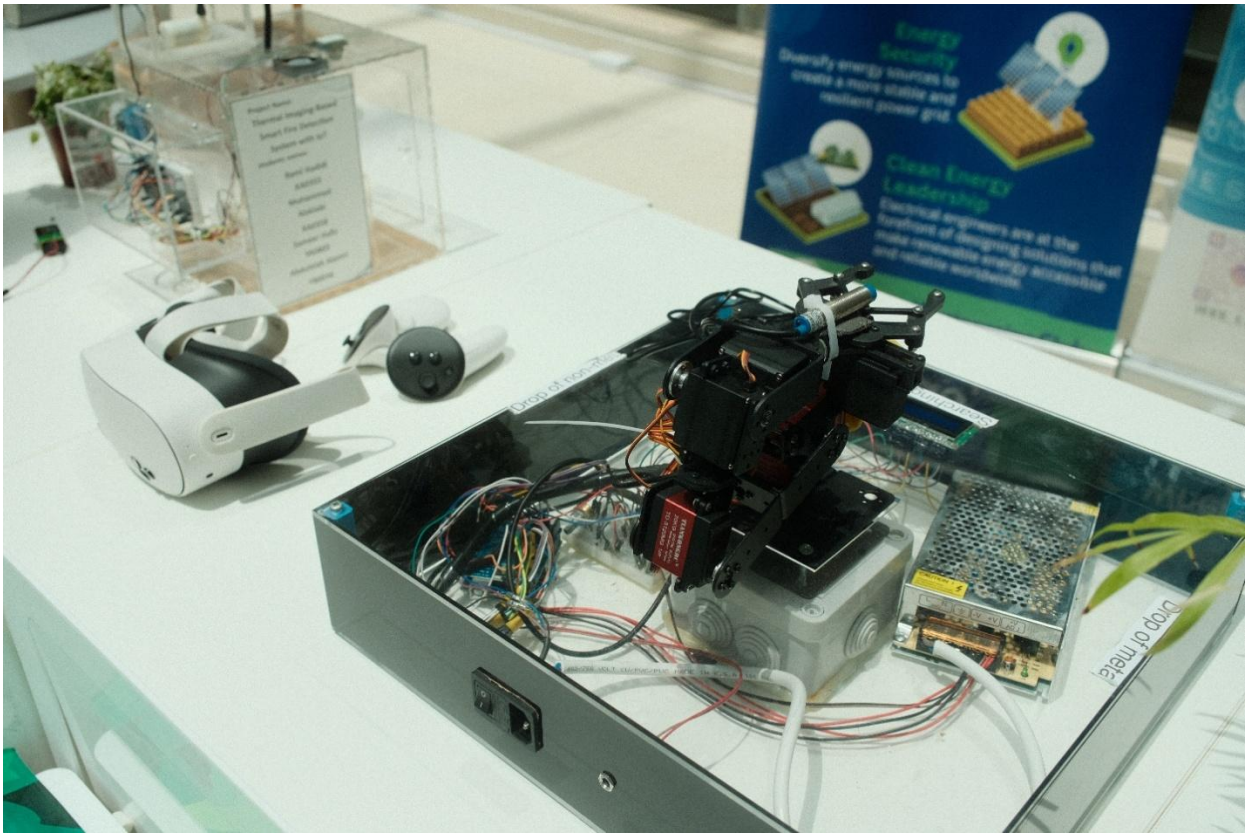

These projects collectively demonstrated how engineering education at UBT can connect sustainability concepts with practical applications, innovation, automation, and real-world problem solving.

7.2 Energy & Water Academy

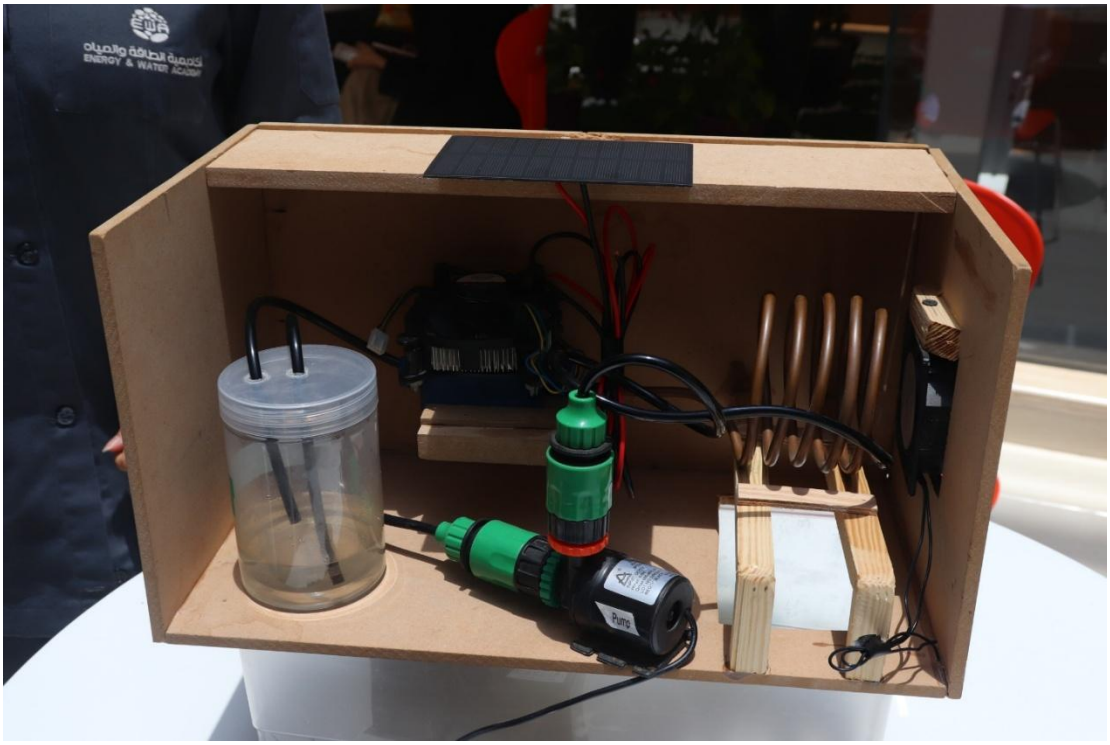

Environmental Innovation & Sustainable Resource Solutions

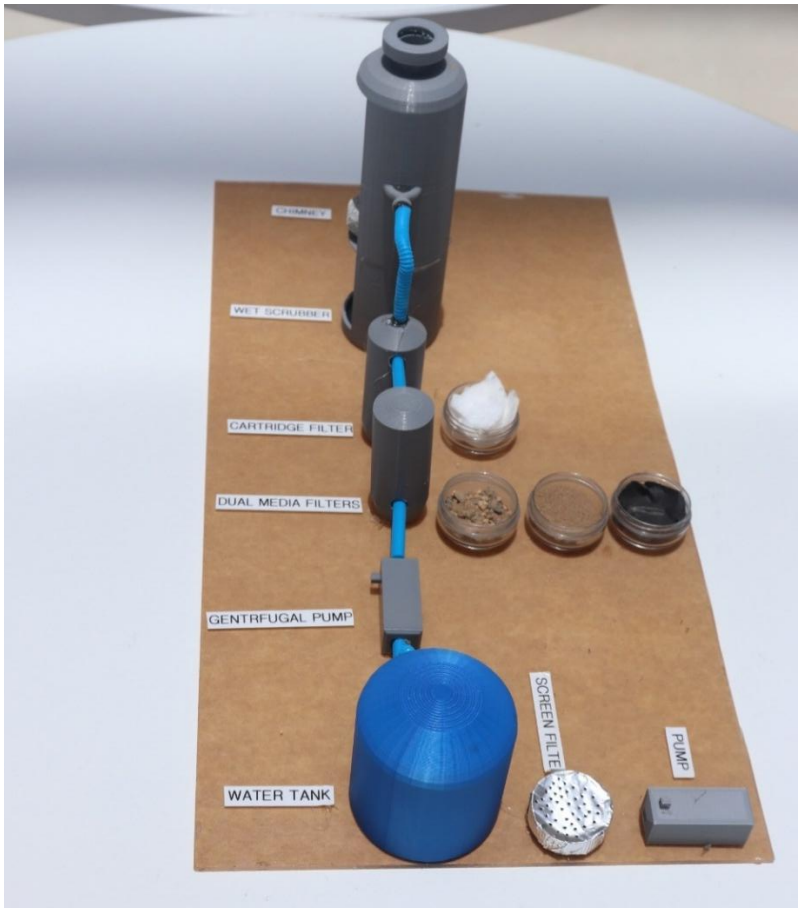

The Energy & Water Academy participated with sustainability-focused engineering projects addressing industrial emissions, renewable energy, water sustainability, and environmental innovation.

One of the featured projects was the **BREATHON Project**, an intelligent filtration system designed to reduce harmful industrial emissions through advanced filtration technologies and AI-powered sensing systems. The project focused on improving air quality, reducing pollution from industrial environments, lowering maintenance requirements, and supporting long-term operational efficiency. According to the project presentation shared during the exhibition, the system can help reduce environmental fines by up to 98% while maintaining operational efficiency for up to five years. The project was awarded the **Silver Medal at the International Innovation Exhibition (ITEX)** for its contribution toward cleaner industrial sustainability solutions.

The Academy also showcased a **solar-powered atmospheric water generator** designed to extract water from humid air using renewable energy. The system demonstrated how solar energy and atmospheric humidity can be utilized together to support environmentally friendly water generation methods for irrigation and animal use in water-scarce environments. The project highlighted innovative approaches toward renewable resource management and sustainable environmental solutions and was also recognized with a **Silver Medal at ITEX Malaysia**.

Together, the projects reflected the role of engineering and environmental innovation in addressing real-world sustainability challenges related to pollution reduction, renewable energy, and resource efficiency.

7.3 Dar Al Rowad Model Schools

Sustainable Art, Recycling & Environmental Creativity

Dar Al Rowad Model Schools contributed one of the exhibition's most visually impactful sustainability displays through a collection of student-led projects focused on sustainability awareness, recycling, sustainable fashion, and environmental creativity.

The participation demonstrated how sustainability education can extend beyond technical solutions and into creative expression, design, and youth engagement. Students presented artistic displays and fashion concepts developed using reused and repurposed materials, transforming waste items into visual art pieces and sustainable design concepts.

Among the featured works were sustainable fashion displays, recycled-material art pieces, and visual awareness projects focused on responsible consumption and recycling culture. The displays highlighted how creativity and environmental awareness can work together to communicate sustainability concepts in engaging and accessible ways.

This section of the exhibition attracted significant participant attention due to its strong visual presentation and interactive artistic approach, helping create conversations around waste reduction, reuse, and sustainable consumer behavior.

FIOWER
SHOP

COFFEE TIME

7.4 King Saud bin Abdulaziz University for Health Sciences (KSAU-HS)

King Saud bin Abdulaziz University for Health Sciences participated with displays focused on the integration of Sustainable Development Goals (SDGs) within educational and institutional environments.

Their participation highlighted themes connected to:

- Equality
- Quality Education
- Innovation and Industry
- Scientific Research
- Community and Societal Impact

The displays demonstrated how universities can integrate sustainability principles into academic environments, awareness initiatives, and institutional development efforts. Through SDG-focused visual materials and educational displays, participants were introduced to the broader role universities play in supporting sustainable development beyond environmental sustainability alone. The participation also strengthened the inter-university collaboration aspect of Sustainability Day 2026 and reinforced the importance of partnerships in advancing sustainability awareness and education.

8. EVENT STATISTICS & IMPACT DATA

Measuring Sustainability Engagement Through Data-Driven Participation

One of the defining strengths of Sustainability Day 2026 was its ability to combine sustainability education with measurable engagement systems that transformed the event from a traditional awareness campaign into a highly interactive, participation-driven, and data-informed sustainability initiative.

Rather than positioning students as passive attendees, the event was intentionally designed around participation, movement, interaction, and experiential learning. Through the integration of QR-based participation systems, digital loyalty cards, sustainability literacy activities, post-event feedback collection, and social media analytics, the event generated measurable insights into student engagement, sustainability awareness, interdisciplinary participation, and behavioral impact.

The use of digital systems additionally reduced reliance on paper-based participation methods while creating a more seamless and accessible participant experience.

8.1 Participation Statistics

To encourage engagement across the event, participants used a QR-based digital loyalty card system inspired by modern café and retail reward systems familiar to students.

Participants received digital participation cards and collected stamps by actively engaging with booths throughout the event. In order to redeem sustainability-themed rewards, participants were required to complete activities across multiple booths rather than remaining within a single activity area.

This structure encouraged interdisciplinary participation while increasing exposure to diverse sustainability themes including climate action, sustainable business, engineering sustainability, mental health, media literacy, responsible consumption, and environmental decision-making.

Loyalty Card Participation Data

- 222 digital participation cards issued
- 443+ recorded booth interactions and QR scans

- Participants required to complete 4 out of 8 booths
- QR-based tracking system implemented instead of paper participation cards

The gamified participation structure significantly increased movement and interaction throughout the event while making sustainability engagement feel more immersive, interactive, and experience-driven. The system also demonstrated how digital participation tools can support sustainability programming while simultaneously reducing paper use and improving event tracking capabilities.

8.2 Interdisciplinary Participation Analysis

One of the strongest indicators of the event's campus-wide reach was the diversity of student participation across all four UBT colleges. Analysis of participant submissions showed that Sustainability Day 2026 successfully attracted students from multiple academic disciplines rather than being concentrated within a single department or specialization.

Participant Distribution by College

Department	Responses	Percentage
College of Business Administration	42	59.2%
Jeddah College of Engineering	16	22.5%
Jeddah College of Advertising	10	14.1%
Jeddah College of Law	3	4.2%

The event attracted students from majors including:

- Business Analytics & Information Systems,
- Finance,
- Marketing,
- Supply Chain Management,
- Software Engineering,
- Cybersecurity,
- Industrial Engineering,
- Architecture,

- Advertising Communication,
- and Law.

The findings reflect strong interdisciplinary engagement across all major academic divisions within UBT and reinforce the event's objective of positioning sustainability as a cross-disciplinary issue relevant to multiple academic and professional fields. The findings additionally provide valuable insight for future event planning and outreach strategies, particularly regarding opportunities to further strengthen participation among underrepresented colleges and disciplines.

8.3 Feedback & Satisfaction Outcomes

Following the event, feedback request emails were distributed digitally to all participants as part of the post-event evaluation and reflection process.

Post-event feedback demonstrated exceptionally strong participant satisfaction levels and positive educational impact. A total of 71 post-event feedback submissions were collected digitally following the event.

Participants reported highly positive overall experiences:

- 93% of participants rated the event 5/5
- 6% rated the event 4/5
- 1% rated the event 3/5

Average Satisfaction Rating: 4.9 / 5

The results indicate exceptionally strong participant satisfaction regarding:

- the booth structure,
- the QR reward system,
- hands-on learning activities,
- volunteer support,
- and the diversity of sustainability topics presented throughout the event.

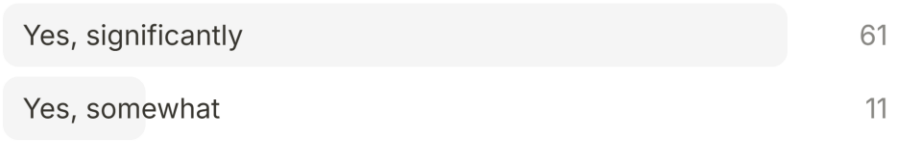

Several participants specifically highlighted the experience-driven format as one of the strongest aspects of the event compared to traditional lecture-style awareness approaches.

8.4 Sustainability Learning & Behavioral Impact

Participants were additionally asked whether the event improved their understanding of sustainability concepts and influenced their perception of sustainable practices.

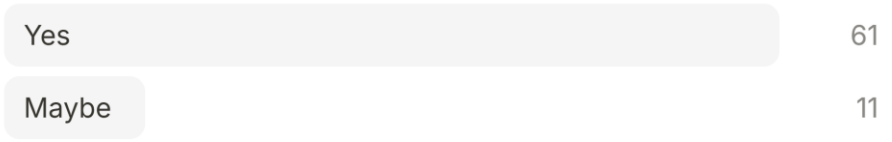

Responses indicated:

- 60 participants stated that the event significantly increased their understanding of sustainability
- 11 participants stated that it somewhat increased their understanding

Participants were also asked whether the event made them more likely to adopt sustainable practices in their daily lives:

- 61 participants selected “Yes”
- 10 participants selected “Maybe”

These findings are particularly significant because they demonstrate that the event succeeded not only in attracting participation, but also in influencing sustainability awareness, behavioral reflection, and personal engagement with sustainable practices.

The results reinforce the effectiveness of experiential sustainability education models that prioritize: participation, interaction, applied learning, systems-thinking, and behavioral engagement over passive informational delivery alone.

Overall Engagement Outcomes

- The collected participation, feedback, and engagement data indicate that Sustainability Day 2026 successfully achieved strong levels of:
- student participation,
- interdisciplinary collaboration,

- sustainability literacy,
- experiential learning,
- digital engagement,
- and community interaction.

The integration of gamification, QR-based systems, interactive booths, sustainability-themed rewards, and experience-driven participation strategies helped create a more immersive and behavior-oriented sustainability experience compared to traditional awareness campaigns.

More importantly, the event demonstrated how sustainability initiatives within higher education can effectively combine education, participation, technology, behavioral incentives, measurable interaction, and community-building to create more impactful and scalable sustainability programming within university environments.

9. COMMUNITY IMPACT & REFLECTION

9.1 Student-Led Execution & Community Collaboration

Sustainability Day 2026 was planned, coordinated, and executed primarily through student leadership and volunteer collaboration across multiple teams and activity areas. More than 50 students joined the event coordination and volunteer communication groups during the preparation phase, with 35+ active volunteers contributing directly to booth facilitation, setup, logistics, participant guidance, media coverage, registration support, QR participation management, and live event coordination throughout the day.

The event demonstrated how student-led initiatives can organize large-scale interdisciplinary sustainability engagement through collaboration, communication, shared responsibility, and community participation.

Volunteer coordination was managed digitally through dedicated WhatsApp communication groups, allowing organizers to coordinate:

- booth assignments,
- schedules,
- setup instructions,
- troubleshooting,
- media coverage,
- and real-time operational updates throughout the event.

This digital coordination structure streamlined communication before and during the event while supporting fast operational adjustments across different activity areas. Student volunteers additionally played a major role in maintaining participant flow, assisting visitors, supporting booth activities, and documenting the event experience through photography and media coverage.

9.2 Sustainable Operations & Volunteer Recognition

To support more sustainable event operations, volunteers were provided with reusable QR-based event badges rather than disposable one-time-use identification materials. Following the event, the badges were collected for reuse in future Sustainability Club activities and events, helping reduce unnecessary printing waste while supporting more resource-efficient event management practices.

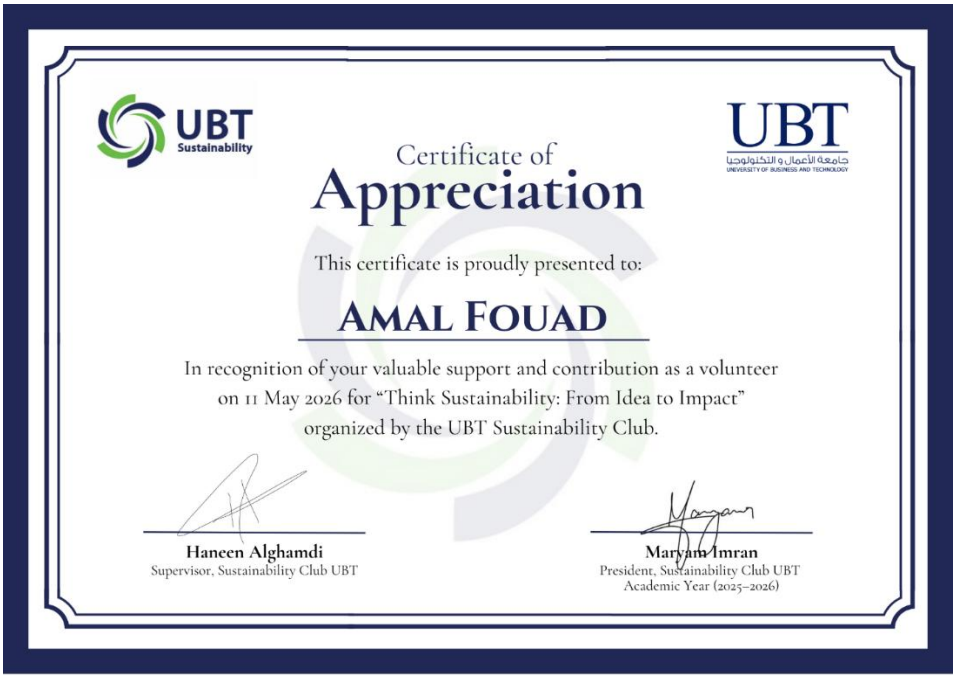

This operational decision reflected the broader sustainability philosophy of the event by integrating sustainability principles directly into event logistics and execution.

As part of Sustainability Day 2026, special recognition certificates were awarded to highly active student leaders and long-term Sustainability Club contributors in appreciation of their leadership and involvement throughout the academic year. Due to the event being hosted at the UBT Corniche female campus, physical certificates were presented on-site to female student leaders, while digital certificates were shared remotely with male leadership contributors to ensure inclusive recognition across the club community.

Following the event, official volunteer participation certificates were also distributed digitally to all volunteers within days of the event in recognition of their contribution and support in making Sustainability Day 2026 possible.

Certificate of
Appreciation

This certificate is proudly presented to:

AMAL FOUAD

In recognition of your valuable support and contribution as a volunteer
on 11 May 2026 for "Think Sustainability: From Idea to Impact"
organized by the UBT Sustainability Club.

Haneen Alghamdi
Supervisor, Sustainability Club UBT

Maryam Imran
President, Sustainability Club UBT
Academic Year (2025–2026)

Thank you for attending **"Think Sustainability: From Idea to Impact"** hosted by the UBT Sustainability Club.

Your participation helped make the event meaningful and impactful. Through the interactive booths, activities, and conversations around sustainability, you contributed to raising awareness and supporting a more sustainable future within the UBT community.

As recognition of your participation, we are happy to share your official Participation Certificate attached to this email as a PNG image.

Take a look back at some of our favorite moments from Sustainability Day 2026 through the event media gallery below!
Please note that the gallery is shared only for attendees, and we kindly ask everyone to be respectful of others' privacy when reposting or sharing photos.

VIEW EVENT PHOTOS & MEDIA

We encourage you to showcase your Sustainability Day 2026 participation by adding your certificate to your LinkedIn profile and sharing your experience while tagging the UBT Sustainability Club. Adding your certificate to the "Media" section on LinkedIn is a great way to highlight your involvement in sustainability initiatives, leadership, community engagement, and extracurricular impact.

Thank you once again for being part of Sustainability Day 2026. We hope to see you at future events and initiatives!

Stay Connected with Sustainability Club at UBT
for future events, workshops, and opportunities.

@ubt.sustainability @ubt.sustainability Sustainability Club

Take a look back at some of our favorite moments from Sustainability Day 2026 through the event media gallery below!
Please note that the gallery is shared only for attendees, and we

Thank you again for being part of Sustainability Day 2026.
Together, we create a better tomorrow.

Best regards,
UBT Sustainability Club

Think. Act. Sustain.

Beyond operational support, the volunteer structure created opportunities for students to strengthen:

- leadership skills,
- teamwork,
- communication,
- sustainability advocacy,
- event coordination,
- and interdisciplinary collaboration experience.

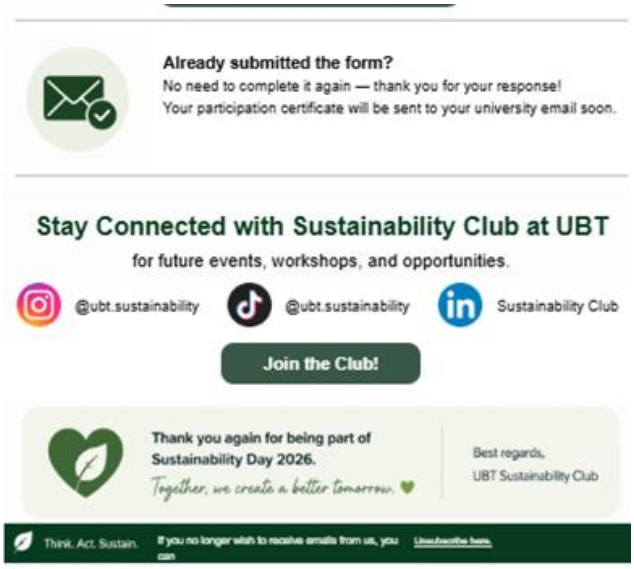

The event highlighted how student-led sustainability initiatives can simultaneously strengthen campus engagement while building practical organizational and leadership experience for participating students.

9.3 Post-Event Communication & Continued Engagement

Sustainability Day 2026 continued beyond the physical event through structured post-event communication, digital follow-up, and ongoing online engagement across multiple platforms.

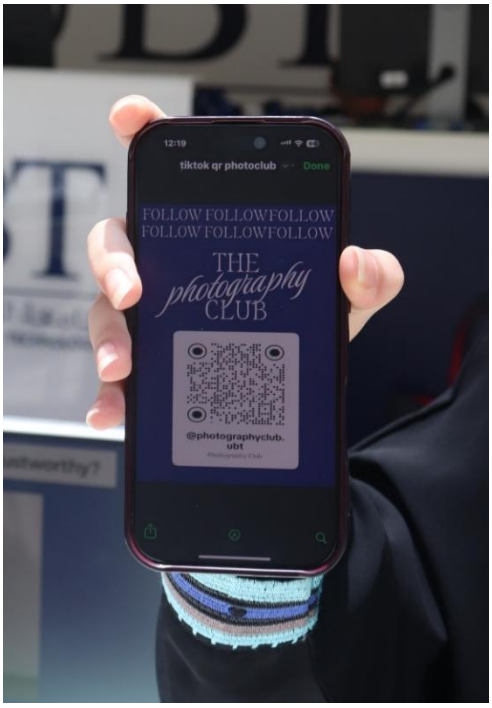

On the same day as the event, follow-up emails were distributed digitally to participants thanking them for attending and inviting them to complete the official post-event feedback form in order to receive their participation certificates. This process helped support post-event evaluation, measure participant experience and sustainability learning outcomes, and improve feedback collection efficiency while reducing printed materials.

Five days later, official participation certificates were distributed digitally through personalized email communication, reinforcing participant recognition while encouraging students to showcase their involvement in sustainability initiatives on LinkedIn and other professional platforms.

Post-event media coverage was additionally strengthened through a collaboration with the UBT Photography Club, whose members contributed event photography and media documentation throughout the day. Their support helped capture booth interactions, volunteer coordination, participant engagement, and key event moments across the venue.

The event also continued online through recap reels, event highlights, and post-event content shared across Instagram and TikTok. These campaigns extended the visibility of Sustainability Day 2026 beyond event attendees while maintaining sustainability engagement online after the event concluded. Several recap videos and highlights generated strong organic engagement, contributing to additional post-event visibility, continued online discussion, and increased Sustainability Club reach across student communities.

The post-event communication strategy demonstrated how sustainability initiatives can continue generating awareness, engagement, recognition, and community interaction beyond a single-day event through digital storytelling and ongoing outreach.

9.4 Participant, Volunteer & Organizer Reflections

Beyond participation numbers and engagement statistics, Sustainability Day 2026 created meaningful interaction, collaboration, and reflection across the UBT community.

The event's hands-on structure encouraged participants to actively engage with sustainability concepts rather than passively observe them. Across booths, discussions, activities, and challenges, students explored sustainability through practical decision-making, collaboration, and experience-driven learning.

Many participants highlighted that the event made sustainability feel more engaging, practical, and easier to connect to everyday life. The booth-based structure, QR reward system, and interdisciplinary activities helped transform sustainability awareness into an interactive campus experience rather than a traditional informational campaign.

Participant Reflections

- "The event was so amazing, I had so much fun. I loved all the interactive booths — my favorite was the Book Club booth!"
- "I loved it, people in charge were amazing. Great experience overall."
- "Thank you for your hard work, keep going."

Volunteer Reflections

- "Thank you so much, I really appreciate it and it was so nice working with the Sustainability Club."
- "Thank you guys for today, I really had fun and I'm wishing the best to you all."
- "Thank you so much, had the best time!"

The collaborative environment created opportunities for students from different colleges and backgrounds to work together toward a shared sustainability objective while strengthening communication, teamwork, leadership, and community engagement across the event.

Sustainability Day 2026 additionally required extensive planning, adaptability, and coordination prior to final implementation. The event underwent multiple scheduling and logistical adjustments before execution, making the final outcome particularly meaningful for the organizing team.

More importantly, the event reinforced that sustainability engagement becomes significantly more impactful when students are encouraged to participate, collaborate, question, and experience sustainability directly rather than only receive information passively.

10. SDG ALIGNMENT & OUTCOMES

	SDG	Event Contribution
	**SDG 3 – Good Health & Well-Being**	The Mental Health & Wellbeing Booth promoted emotional wellbeing, supportive communities, mental health awareness, and access to student support resources.
	**SDG 4 – Quality Education**	The event strengthened sustainability literacy through climate simulations, sustainability assessments, experiential learning activities, and interdisciplinary educational engagement.
	**SDG 6 – Clean Water & Sanitation**	Multiple engineering and exhibition projects focused on water sustainability, including smart irrigation systems, atmospheric water generation technologies, water efficiency concepts, and environmental monitoring systems designed to improve sustainable water usage and resource management.
	**SDG 7 – Affordable & Clean Energy**	Exhibition projects related to renewable energy, smart irrigation systems, environmental monitoring, and solar-powered technologies promoted awareness surrounding clean energy and resource efficiency.
	**SDG 9 – Industry, Innovation & Infrastructure**	Engineering and innovation projects demonstrated the role of AI, IoT systems, automation, and sustainability technologies in solving environmental and operational challenges.

	SDG	Event Contribution
	**SDG 11 – Sustainable Cities & Communities**	The event promoted sustainable campus engagement, community participation, environmental awareness, and collaborative sustainability culture through student-led initiatives and partnerships.
	**SDG 12 – Responsible Consumption & Production**	Activities including the Book Exchange Booth, reusable bottle rewards, reusable volunteer badges, QR-based systems, and repair culture discussions promoted reuse, waste reduction, and responsible consumption practices.
	**SDG 13 – Climate Action**	Climate action themes were integrated throughout the Carbon Lab Booth, climate simulations, sustainability literacy activities, and environmental innovation projects focused on emissions reduction and sustainability awareness.
	**SDG 17 – Partnerships for the Goals**	Sustainability Day 2026 strengthened collaboration between universities, student organizations, volunteers, institutional stakeholders, and external sustainability-focused partners.

11. CONCLUSION

Sustainability Day 2026 demonstrated how sustainability engagement can become significantly more impactful when students are encouraged to participate, interact, collaborate, and experience sustainability directly rather than only receive information passively.

Through interactive booths, climate simulations, sustainability literacy activities, innovation showcases, and interdisciplinary collaboration, the event successfully transformed sustainability into a more engaging, practical, and accessible experience for students across different academic disciplines.

Post-event feedback reflected strong educational impact and participant satisfaction, with many students reporting increased sustainability awareness and greater interest in adopting sustainable practices within their daily lives.

10.1 Challenges & Limitations

As a large student-led initiative involving multiple collaborators, booths, and activity areas, the event required extensive coordination and operational flexibility throughout the planning process.

The event also underwent multiple rescheduling periods prior to final implementation, creating additional logistical and communication challenges related to:

- scheduling,
- volunteer coordination,
- exhibition preparation,
- and event execution.
- limited space during peak participation periods,
- time constraints during setup,
- and the challenge of balancing educational depth with highly interactive engagement within a single-day event.

These experiences provided valuable insight for improving future sustainability initiatives and large-scale student engagement events.

10.2 Future Opportunities

Future editions of Sustainability Day may include:

- expanded exhibition spaces,
- increased university and industry partnerships,
- additional workshops and speaker sessions,
- broader sustainability research activities,
- and larger interdisciplinary participation across the university community.

The event highlighted strong student interest in experience-driven sustainability engagement and demonstrated the value of continuing similar initiatives as part of UBT's wider sustainability culture and student engagement efforts.

10.3 Acknowledgements

The UBT Sustainability Club extends sincere appreciation to:

- Miss Haneen,
- Dr. Yussra,
- all student volunteers,
- participating universities and schools,
- collaborating student clubs,
- external contributors,
- and all attendees who helped make Sustainability Day 2026 possible.

Their support, effort, collaboration, and participation played a major role in the success of the event and its impact across the UBT community.
